## $300 \mathrm{MHz}, 2.5 \Omega$, Dual SPDT Analog Switches

## DESCRIPTION

The DG3516, DG3517 are dual SPDT analog switches which operate from 1.8 V to 5.5 V single rail power supply. They are design for audio, video, and USB switching applications.
The devices have $2.5 \Omega$ on-resistance and 300 MHz 3 dB bandwidth. $0.2 \Omega$ on-resistance matching and $1 \Omega$ flatness make the device high linearity. The devices are 1.6 V logic compatible within the full operation voltage range.
These switches are built on a sub-micron high density process that brings low power consumption and low voltage performance.
The switches are packaged in MICRO FOOT chip scale package of $4 \mathrm{~mm} \times 3 \mathrm{~mm}$ bump array.
As a committed partner to the community and environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. For MICRO FOOT analog switch products manufactured with tin/silver/copper ( SnAgCu ) device termination, the lead ( Pb )-free "-E1" suffix is being used as a designator.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
