### Functional Diagram

### **General Description**

The HMC333 & HMC333E are single balanced mixer ICs with integrated LO amplifiers. This converter IC can operate as an upconverter or downconverter between 3.0 GHz and 3.8 GHz. With the integrated LO amplifier, the mixer requires an LO drive level of only 0 dBm, and requires only 7 mA from a single positive +3V rail. The mixer has 8.5 dB of conversion loss, an input P1dB of 0 dBm and an input third order intercept point of +10 dBm at 3.5 GHz.

## GaAs MMIC MIXER w/ INTEGRATED LO AMPLIFIER, 3.0 - 3.8 GHz

#### **Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1	Vdd	Power supply for the LO Amplifier. Two external RF bypass capacitors (10 pF & 10,000 pF) and an external inductor (1.8 nH) are required.	Vdd O
2, 5	GND	Ground: Pin must connect to RF ground.	
3	IF	This pin is DC coupled. For applications not requiring opera- tion to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 3mA of current or die non- function and possible die failure will result.	
4	RF	This pin is AC coupled and matched to 50 Ohm from 3.0 - 3.8 GHz.	RFO
6	LO	This pin is AC coupled and matched to 50 Ohm from 3.0 - 3.8 GHz	Vdd

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
