

## ISO7142CC 4242-V<sub>PK</sub> Small-Footprint and Low-Power Quad Channel Digital Isolator

### 1 Features

- Maximum Signaling Rate: 50 Mbps (with 5-V Supplies)
- Robust Design With Integrated Noise Filter
- Low-Power Consumption, Typical I<sub>CC</sub> per Channel (with 3.3-V Supplies):
  - 1.3 mA at 1 Mbps, 2.5 mA at 25 Mbps
- Wide Temperature Range: –55°C to 125°C
- 50 kV/μs Transient Immunity, Typical
- Long Life with SiO<sub>2</sub> Isolation Barrier
- Operates From 2.7-V, 3.3-V and 5-V Supply
- 2.7-V to 5.5-V Level Translation
- Small QSOP-16 Package
- Safety and Regulatory Approvals
  - 2500-V<sub>RMS</sub> Isolation for 1 Minute per UL 1577
  - 4242-V<sub>PK</sub> Isolation per DIN V VDE V 0884-10 (VDE V 0884-10):2006-12
  - CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 61010-1 End Equipment Standards
  - CQC Certification per GB4943.1-2011

### 2 Applications

- General Purpose Isolation
- Industrial Automation
- Motor Control
- Solar Inverters

### 3 Description

ISO7142CC provides galvanic isolation up to 2500-V<sub>RMS</sub> for 1 minute per UL and 4242-V<sub>PK</sub> per VDE. ISO7142CC is a quad-channel isolator with two forward and two reverse-direction channels. This device is capable of maximum data rate of 50 Mbps with 5-V supplies and 40 Mbps with 3.3-V or 2.7-V supplies. ISO7142CC has integrated filters on the inputs to support noise-prone applications.

Each isolation channel has a logic input and output buffer separated by a silicon dioxide (SiO<sub>2</sub>) insulation barrier. Used in conjunction with isolated power supplies, this device prevents noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. This device has TTL input thresholds and can operate from 2.7-V, 3.3-V, and 5-V supplies.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ISO7142CC	SSOP (16)	4.90 mm x 3.90 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### Simplified Schematic

(1) V<sub>CCI</sub> and GNDI are supply and ground connections respectively for the input channels.

(2) V<sub>CCO</sub> and GNDO are supply and ground connections respectively for the output channels.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision A (September 2013) to Revision B</b>	<b>Page</b>
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1
• Changed VDE Standard to DIN V VDE V 0884-10 (VDE V 0884-10)2006-12 .....	1

<b>Changes from Original (September 2013) to Revision A</b>	<b>Page</b>
• Deleted the MIN value of $-55^{\circ}\text{C}$ from $T_J$ in the RECOMMENDED OPERATING CONDITIONS table .....	4
• Changed the TYP value of $C_1$ From: 3.5 To: 2 pF in the INSULATION AND SAFETY-RELATED SPECIFICATIONS table .....	13
• Changed the CSA column description for Basic Insulation .....	14
• Changed <a href="#">Figure 13</a> .....	15

## 5 Pin Configuration and Functions

**Pin Functions**

PIN		I/O	DESCRIPTION
NAME	NO.		
EN1	7	I	Output enable 1. Output pins on side 1 are enabled when EN1 is high or open and in high-impedance state when EN1 is low.
EN2	10	I	Output enable 2. Output pins on side 2 are enabled when EN2 is high or open and in high-impedance state when EN2 is low.
GND1	2,8	—	Ground connection for $V_{CC1}$
GND2	9,15	—	Ground connection for $V_{CC2}$
INA	3	I	Input, channel A
INB	4	I	Input, channel B
INC	12	I	Input, channel C
IND	11	I	Input, channel D
OUTA	14	O	Output, channel A
OUTB	13	O	Output, channel B
OUTC	5	O	Output, channel C
OUTD	6	O	Output, channel D
$V_{CC1}$	1	—	Power supply, $V_{CC1}$
$V_{CC2}$	16	—	Power supply, $V_{CC2}$

## 6 Specifications

### 6.1 Absolute Maximum Ratings<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC1}, V_{CC2}$	Supply voltage <sup>(2)</sup>	-0.5	6	V
V	Voltage at INx, OUTx, ENx	-0.5	$V_{CC} + 0.5^{(3)}$	V
$I_O$	Output current	-15	15	mA
$T_J$	Maximum junction temperature		150	°C
$T_{stg}$	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.
- (3) Maximum voltage must not exceed 6 V.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge		V
	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4000	
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
$V_{CC1}, V_{CC2}$	Supply voltage	2.7		5.5	V
$I_{OH}$	High-level output current ( $V_{CC} \geq 3.0$ V)	-4			mA
	High-level output current ( $V_{CC} < 3.0$ V)	-2			
$I_{OL}$	Low-level output current			4	mA
$V_{IH}$	High-level input voltage	2		5.5	V
$V_{IL}$	Low-level input voltage	0		0.8	V
$t_{ui}$	Input pulse duration ( $V_{CC} \geq 4.5$ V)	20			ns
	Input pulse duration ( $V_{CC} < 4.5$ V)	25			
$1 / t_{ui}$	Signaling rate ( $V_{CC} \geq 4.5$ V)	0		50	Mbps
	Signaling rate ( $V_{CC} < 4.5$ V)	0		40	
$T_J$	Junction temperature			136	°C
$T_A$	Ambient temperature	-55	25	125	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	ISO7142CC	UNIT	
	DBQ (SSOP)		
	16 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	104.5	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	57.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	46.8	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	18.3	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	46.4	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](http://www.ti.com/lit/zip/Spra953).

## 6.5 Electrical Characteristics, 5 V

 $V_{CC1}$  and  $V_{CC2}$  at 5 V  $\pm$  10% (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH}$	High-level output voltage	$I_{OH} = -4$ mA; see <a href="#">Figure 8</a>	$V_{CCO}^{(1)} - 0.5$			V
		$I_{OH} = -20$ $\mu$ A; see <a href="#">Figure 8</a>	$V_{CCO} - 0.1$			
$V_{OL}$	Low-level output voltage	$I_{OL} = 4$ mA; see <a href="#">Figure 8</a>	0.4			V
		$I_{OL} = 20$ $\mu$ A; see <a href="#">Figure 8</a>	0.1			
$V_{I(HYS)}$	Input threshold voltage hysteresis		480			mV
$I_{IH}$	High-level input current	$V_{IH} = V_{CCI}^{(1)}$ at INx or ENx	10			$\mu$ A
$I_{IL}$	Low-level input current	$V_{IL} = 0$ V at INx or ENx	-10			
CMTI	Common-mode transient immunity	$V_I = V_{CCI}$ or 0 V; see <a href="#">Figure 11</a>	25	70		kV/ $\mu$ s

(1)  $V_{CCI}$  = Supply voltage for the input channel;  $V_{CCO}$  = Supply voltage for the output channel

## 6.6 Electrical Characteristics, 3.3 V

 $V_{CC1}$  and  $V_{CC2}$  at 3.3 V  $\pm$  10% (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH}$	High-level output voltage	$I_{OH} = -4$ mA; see <a href="#">Figure 8</a>	$V_{CCO}^{(1)} - 0.5$			V
		$I_{OH} = -20$ $\mu$ A; see <a href="#">Figure 8</a>	$V_{CCO} - 0.1$			
$V_{OL}$	Low-level output voltage	$I_{OL} = 4$ mA; see <a href="#">Figure 8</a>	0.4			V
		$I_{OL} = 20$ $\mu$ A; see <a href="#">Figure 8</a>	0.1			
$V_{I(HYS)}$	Input threshold voltage hysteresis		460			mV
$I_{IH}$	High-level input current	$V_{IH} = V_{CCI}^{(1)}$ at INx or ENx	10			$\mu$ A
$I_{IL}$	Low-level input current	$V_{IL} = 0$ V at INx or ENx	-10			
CMTI	Common-mode transient immunity	$V_I = V_{CCI}$ or 0 V; see <a href="#">Figure 11</a>	25	50		kV/ $\mu$ s

(1)  $V_{CCI}$  = Supply voltage for the input channel;  $V_{CCO}$  = Supply voltage for the output channel

## 6.7 Electrical Characteristics, 2.7 V

 $V_{CC1}$  and  $V_{CC2}$  at 2.7 V (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH}$	High-level output voltage	$I_{OH} = -2$ mA; see <a href="#">Figure 8</a>	$V_{CCO}^{(1)} - 0.3$			V
		$I_{OH} = -20$ $\mu$ A; see <a href="#">Figure 8</a>	$V_{CCO} - 0.1$			
$V_{OL}$	Low-level output voltage	$I_{OL} = 4$ mA; see <a href="#">Figure 8</a>	0.4			V
		$I_{OL} = 20$ $\mu$ A; see <a href="#">Figure 8</a>	0.1			
$V_{I(HYS)}$	Input threshold voltage hysteresis		360			mV
$I_{IH}$	High-level input current	$V_{IH} = V_{CCI}^{(1)}$ at INx or ENx	10			$\mu$ A
$I_{IL}$	Low-level input current	$V_{IL} = 0$ V at INx or ENx	-10			
CMTI	Common-mode transient immunity	$V_I = V_{CCI}$ or 0 V; see <a href="#">Figure 11</a>	25	45		kV/ $\mu$ s

(1)  $V_{CCI}$  = Supply voltage for the input channel;  $V_{CCO}$  = Supply voltage for the output channel

## 6.8 Power Dissipation Characteristics

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_D$	Device power dissipation $V_{CC1} = V_{CC2} = 5.5$ V, $T_J = 150^\circ$ C, $C_L = 15$ pF Input a 25-MHz, 50% duty cycle square wave			170	mW

## 6.9 Switching Characteristics, 5 V

 $V_{CC1}$  and  $V_{CC2}$  at 5 V  $\pm$  10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}$ , $t_{PHL}$ Propagation delay time	See <a href="#">Figure 8</a>	15	21	38	ns
PWD <sup>(1)</sup> Pulse width distortion $ t_{PHL} - t_{PLH} $	See <a href="#">Figure 8</a>			3.5	ns
$t_{sk(o)}$ <sup>(2)</sup> Channel-to-channel output skew time	Same-direction channels			1.5	ns
	Opposite-direction channels			6.5	
$t_{sk(pp)}$ <sup>(3)</sup> Part-to-part skew time				14	ns
$t_r$ Output signal rise time	See <a href="#">Figure 8</a>		2.5		ns
$t_f$ Output signal fall time	See <a href="#">Figure 8</a>		2.1		ns
$t_{PHZ}$ , $t_{PLZ}$ Disable propagation delay, high/low-to-high impedance output	See <a href="#">Figure 9</a>		7	12	ns
$t_{PZH}$ Enable propagation delay, high impedance-to-high output	See <a href="#">Figure 9</a>		6	12	ns
$t_{PZL}$ Enable propagation delay, high impedance-to-low output	See <a href="#">Figure 9</a>		12	23	us
$t_{fs}$ Fail-safe output delay time from input data or power loss	See <a href="#">Figure 10</a>		8		$\mu$ s
$t_{GR}$ Input glitch rejection time			9.5		ns

(1) Also known as pulse skew

(2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals, and loads.

## 6.10 Switching Characteristics, 3.3 V

 $V_{CC1}$  and  $V_{CC2}$  at 3.3 V  $\pm$  10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}$ , $t_{PHL}$ Propagation delay time	See <a href="#">Figure 8</a>	16	25	46	ns
PWD <sup>(1)</sup> Pulse width distortion $ t_{PHL} - t_{PLH} $	See <a href="#">Figure 8</a>			3	ns
$t_{sk(o)}$ <sup>(2)</sup> Channel-to-channel output skew time	Same-direction Channels			2	ns
	Opposite-direction Channels			6.5	
$t_{sk(pp)}$ <sup>(3)</sup> Part-to-part skew time				21	ns
$t_r$ Output signal rise time	See <a href="#">Figure 8</a>		3		ns
$t_f$ Output signal fall time	See <a href="#">Figure 8</a>		2.5		ns
$t_{PHZ}$ , $t_{PLZ}$ Disable propagation delay, from high/low to high-impedance output	See <a href="#">Figure 9</a>		9	14	ns
$t_{PZH}$ Enable propagation delay, from high-impedance to high output	See <a href="#">Figure 9</a>		9	17	ns
$t_{PZL}$ Enable propagation delay, from high-impedance to low output	See <a href="#">Figure 9</a>		12	24	us
$t_{fs}$ Fail-safe output delay time from input data or power loss	See <a href="#">Figure 10</a>		7		$\mu$ s
$t_{GR}$ Input glitch rejection time			11		ns

(1) Also known as pulse skew

(2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

## 6.11 Switching Characteristics, 2.7 V

 $V_{CC1}$  and  $V_{CC2}$  at 2.7 V (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}$ , $t_{PHL}$	Propagation delay time	See Figure 8	18	28	50	ns
PWD <sup>(1)</sup>	Pulse width distortion $ t_{PHL} - t_{PLH} $	See Figure 8			3	ns
$t_{sk(o)}$ <sup>(2)</sup>	Channel-to-channel output skew time	Same-direction Channels			3	ns
		Opposite-direction Channels			8.5	ns
$t_{sk(pp)}$ <sup>(3)</sup>	Part-to-part skew time				24	ns
$t_r$	Output signal rise time	See Figure 8		3.5		ns
$t_f$	Output signal fall time	See Figure 8		2.8		ns
$t_{PHZ}$ , $t_{PLZ}$	Disable propagation delay, from high/low to high-impedance output	See Figure 9		10	15	ns
$t_{PZH}$	Enable propagation delay, from high-impedance to high output	See Figure 9		10	19	ns
$t_{PZL}$	Enable propagation delay, from high-impedance to low output	See Figure 9		12	23	us
$t_{fs}$	Fail-safe output delay time from input data or power loss	See Figure 10		7		μs
$t_{GR}$	Input glitch rejection time			12		ns

(1) Also known as pulse skew

(2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals, and loads.

## 6.12 Supply Current, 5 V

 $V_{CC1}$  and  $V_{CC2}$  at 5 V ± 10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
$I_{CC1}$ , $I_{CC2}$	Disable	EN1 = EN2 = 0 V		0.8	1.6	mA
$I_{CC1}$ , $I_{CC2}$	DC to 1 Mbps	DC Signal: $V_I = V_{CC1}$ or 0 V, AC Signal: All channels switching with square wave clock input; $C_L = 15$ pF		3.3	5	
$I_{CC1}$ , $I_{CC2}$	10 Mbps			4.9	7	
$I_{CC1}$ , $I_{CC2}$	25 Mbps			7.3	10	
$I_{CC1}$ , $I_{CC2}$	50 Mbps			11.1	14.5	

## 6.13 Supply Current, 3.3 V

 $V_{CC1}$  and  $V_{CC2}$  at 3.3 V ± 10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
$I_{CC1}$ , $I_{CC2}$	Disable	EN1 = EN2 = 0 V		0.5	1	mA
$I_{CC1}$ , $I_{CC2}$	DC to 1 Mbps	DC signal: $V_I = V_{CC1}$ or 0 V AC signal: All channels switching with square-wave clock input; $C_L = 15$ pF		2.5	4	
$I_{CC1}$ , $I_{CC2}$	10 Mbps			3.5	5	
$I_{CC1}$ , $I_{CC2}$	25 Mbps			5	7	
$I_{CC1}$ , $I_{CC2}$	40 Mbps			6.5	10	

## 6.14 Supply Current, 2.7 V

 $V_{CC1}$  and  $V_{CC2}$  at 2.7 V (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
$I_{CC1}$ , $I_{CC2}$	Disable	EN1 = EN2 = 0 V		0.4	0.8	mA
$I_{CC1}$ , $I_{CC2}$	DC to 1 Mbps	DC signal: $V_I = V_{CC1}$ or 0 V AC signal: All channels switching with square-wave clock input; $C_L = 15$ pF		2.2	3.5	
$I_{CC1}$ , $I_{CC2}$	10 Mbps			3	4.2	
$I_{CC1}$ , $I_{CC2}$	25 Mbps			4.2	5.5	
$I_{CC1}$ , $I_{CC2}$	40 Mbps			5.4	7.5	

### 6.15 Typical Characteristics

Typical Characteristics (continued)

Figure 7. Peak-Peak Output Jitter vs Data Rate

## 7 Parameter Measurement Information

- A. The input pulse is supplied by a generator having the following characteristics: PRR  $\leq$  50 kHz, 50% duty cycle,  $t_r \leq$  3 ns,  $t_f \leq$  3 ns,  $Z_o = 50 \Omega$ . At the input, a 50- $\Omega$  resistor is required to terminate the input-generator signal. It is not needed in an actual application.
- B.  $C_L = 15$  pF and includes instrumentation and fixture capacitance within  $\pm 20\%$ .

**Figure 8. Switching-Characteristics Test Circuit and Voltage Waveforms**

## 8 Detailed Description

### 8.1 Overview

The isolator in [Figure 12](#) is based on a capacitive isolation barrier technique. The I/O channel of the device consists of two internal data channels, a high-frequency channel (HF) with a bandwidth from 100 kbps up to 50 Mbps, and a low-frequency channel (LF) covering the range from 100 kbps down to DC. In principle, a single-ended input signal entering the HF-channel is split into a differential signal through the inverter gate at the input. The following capacitor-resistor networks differentiate the signal into transients, which then are converted into differential pulses by two comparators. The comparator outputs drive a NOR-gate flip-flop whose output feeds an output multiplexer. A decision logic (DCL) at the driving output of the flip-flop measures the durations between signal transients. If the duration between two consecutive transients exceeds a certain time limit, (as in the case of a low-frequency signal), the DCL forces the output-multiplexer to switch from the high- to the low-frequency channel.

Because low-frequency input signals require the internal capacitors to assume prohibitively large values, these signals are pulse-width modulated (PWM) with the carrier frequency of an internal oscillator, thus creating a sufficiently high frequency signal, capable of passing the capacitive barrier. As the input is modulated, a low-pass filter (LPF) is needed to remove the high-frequency carrier from the actual data before passing it on to the output multiplexer.

### 8.2 Functional Block Diagram

**Figure 12. Conceptual Block Diagram of a Digital Capacitive Isolator**

### 8.3 Feature Description

#### 8.3.1 Insulation and Safety-Related Specifications

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
DTI Distance through the insulation	Minimum internal gap (internal clearance)	0.014			mm
$C_I^{(1)}$ Input capacitance	$V_I = V_{CC}/2 + 0.4 \sin(2\pi ft)$ , $f = 1 \text{ MHz}$ , $V_{CC} = 5 \text{ V}$		2		pF
<b>DIN V VDE V 0884-10 (VDE V 0884-10):2006-12</b>					
$V_{IOTM}$ Maximum transient isolation voltage				4242	$V_{PK}$
$V_{IORM}$ Maximum working isolation voltage				566	$V_{PK}$
$V_{PR}$ Input-to-output test voltage	After Input/Output safety test subgroup 2/3, $V_{PR} = V_{IORM} \times 1.2$ , $t = 10 \text{ s}$ , Partial discharge $< 5 \text{ pC}$			679	$V_{PK}$
	Method a, After environmental tests subgroup 1, $V_{PR} = V_{IORM} \times 1.6$ , $t = 10 \text{ s}$ , Partial discharge $< 5 \text{ pC}$			906	
	Method b1, 100% production test, $V_{PR} = V_{IORM} \times 1.875$ , $t = 1 \text{ s}$ , Partial discharge $< 5 \text{ pC}$			1061	
L(101) Minimum air gap (clearance)	Shortest terminal to terminal distance through air	3.7			mm
L(102) Minimum external tracking (creepage)	Shortest terminal to terminal distance across the package surface	3.7			mm
	Pollution degree		2		
CTI Tracking resistance (comparative tracking index)	DIN EN 60112 (VDE 0303-11); IEC 60112	$\geq 400$			V
$R_{IO}^{(2)}$ Isolation resistance, input to output	$V_{IO} = 500 \text{ V}$ , $T_A = 25^\circ\text{C}$			$>10^{12}$	$\Omega$
	$V_{IO} = 500 \text{ V}$ , $100^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$			$>10^{11}$

$V_{ISO}$ Withstanding Isolation voltage	$V_{TEST} = V_{ISO} = 2500 V_{RMS}$ , 60 sec (qualification); $V_{TEST} = 1.2 * V_{ISO} = 3000 V_{RMS}$ , 1 sec (100% production)			2500	$V_{RMS}$

(1) Measured from input data pin to ground.

(2) All pins on each side of the barrier tied together creating a two-terminal device.

#### NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

**Table 1. IEC 60664-1 Ratings Table**

PARAMETER	TEST CONDITIONS	SPECIFICATION
Material Group		II
Installation classification / Overvoltage Category for Basic Insulation	Rated mains voltage $\leq 150 V_{RMS}$	I–IV
	Rated mains voltage $\leq 300 V_{RMS}$	I–III

### 8.3.2 Regulatory Information

Certified according to DIN V VDE V 0884-10 (VDE V 0884-10):2006-12 and DIN EN 61010-1 (VDE 0411-1):2011-07	Certified under UL 1577 Component Recognition Program	Approved under CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 61010-1	Certified according to GB 4943.1-2011
Basic Insulation; Maximum transient Isolation Isolatiisolationvoltage, 4242 V <sub>PK</sub> Maximum working isolation voltage, 566 V <sub>PK</sub>	Single protection, 2500 V <sub>RMS</sub> <sup>(1)</sup>	3000 V <sub>RMS</sub> Isolation rating; 185 V <sub>RMS</sub> Reinforced Insulation and 370 V <sub>RMS</sub> Basic Insulation per CSA 60950-1-07+A1+A2 and IEC 60950-1 2nd Ed.+A1+A2; 150 V <sub>RMS</sub> Reinforced Insulation and 300 V <sub>RMS</sub> Basic Insulation per CSA 61010-1-12 and IEC 61010-1 3rd Ed.	Basic Insulation, Altitude ≤ 5000m, Tropical climate, 250 V <sub>RMS</sub> maximum working voltage.
File number: 40016131	File number: E181974	Master contract number: 220991	Certificate number: CQC14001109540

(1) Production tested ≥ 3000 V<sub>RMS</sub> for 1 second in accordance with UL 1577.

### 8.3.3 Safety Limiting Values

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier, potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS			UNIT
	MIN	TYP	MAX	
I <sub>S</sub> Safety input, output, or supply current	DBQ-16	θ <sub>JA</sub> = 104.5°C/W, V <sub>I</sub> = 5.5V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C		217
		θ <sub>JA</sub> = 104.5°C/W, V <sub>I</sub> = 3.6V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C		332
		θ <sub>JA</sub> = 104.5°C/W, V <sub>I</sub> = 2.7V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C		443
T <sub>S</sub> Maximum safety temperature			150	°C

The safety-limiting constraint is the absolute-maximum junction temperature specified in the *Absolute Maximum Ratings* table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the *Thermal Information* table is that of a device installed on a high-K test board for leaded surface-mount packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

NOTE: Thermal Derating Curve for Safety Limiting Current per VDE

8.4 Device Functional Modes

Table 2. Function Table<sup>(1)</sup>

V <sub>CCI</sub>	V <sub>CCO</sub>	INPUT (IN <sub>x</sub> )	OUTPUT ENABLE (EN <sub>x</sub> )	OUTPUT (OUT <sub>x</sub> )
PU	PU	H	H or open	H
		L	H or open	L
		X	L	Z
		Open	H or open	H
PD	PU	X	H or open	H
PD	PU	X	L	Z
X	PD	X	X	Undetermined

(1) V<sub>CCI</sub> = Input-side Supply Voltage; V<sub>CCO</sub> = Output-side Supply Voltage; PU = Powered Up (V<sub>CC</sub> ≥ 2.7 V); PD = Powered Down (V<sub>CC</sub> ≤ 2.1 V); X = Irrelevant; H = High Level; L = Low Level; Z = High Impedance

Figure 13. Device I/O Schematics

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

ISO7142CC uses single-ended TTL-logic switching technology. Its supply voltage range is from 2.7 V to 5.5 V for both supplies,  $V_{CC1}$  and  $V_{CC2}$ . When designing with digital isolators, it is important to note that due to the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is,  $\mu C$  or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

### 9.2 Typical Application

Typical isolated RS-232 interface implementation is shown in Figure 14.

Figure 14. Typical Isolated RS-232 Application Circuit for ISO7142

#### 9.2.1 Design Requirements

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, ISO7142CC only requires two external bypass capacitors to operate.

Typical Application (continued)

9.2.2 Detailed Design Procedure

Figure 15 shows the hookup of a typical ISO7142CC circuit. The only external components are two bypass capacitors.

Figure 15. Typical ISO7142CC Circuit Hook-up

## Typical Application (continued)

### 9.2.3 Application Curves

Figure 16. Typical Eye Diagram at 40 Mbps, PRBS  $2^{16} - 1$ , 2.7-V Operation

Figure 17. Typical Eye Diagram at 40 Mbps, PRBS  $2^{16} - 1$ , 3.3-V Operation

Figure 18. Typical Eye Diagram at 50 Mbps, PRBS  $2^{16} - 1$ , 5-V Operation

## 10 Power Supply Recommendations

To help ensure reliable operation supply voltages, a 0.1- $\mu\text{F}$  bypass capacitor is recommended at input and output supply pins ( $V_{CC1}$  and  $V_{CC2}$ ). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' [SN6501](#). For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501](#) datasheet ([SLLSEA0](#)).

## 11 Layout

### 11.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 19](#)). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/in<sup>2</sup>.
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power and ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, see Application Note, *Digital Isolator Design Guide*, [SLLA284](#).

#### 11.1.1 PCB Material

For digital circuit boards operating below 150 Mbps, (or rise and fall times higher than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL 94 V-0 printed circuit board. This is preferred over cheaper alternatives because of lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and self-extinguishing flammability-characteristics.

### 11.2 Layout Example

### 12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.3 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

### 12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
ISO7142CCDBQ	ACTIVE	SSOP	DBQ	16	75	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-55 to 125	7142C	<a href="#">Samples</a>
ISO7142CCDBQR	ACTIVE	SSOP	DBQ	16	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-55 to 125	7142C	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
