

## 11.35-Gbps Differential Modulator Driver with Output Waveform Shaping

Check for Samples: [ONET1151M](#)

### FEATURES

- 1.5- $V_{PP}$  Single-Ended Output Voltage into a 50- $\Omega$  Load
- Programmable Input Equalizer
- Output Pre-emphasis
- Adjustable Rise and Fall Times
- Cross-Point Control
- Output Polarity Select
- 2-Wire Digital Interface
- Single 3.3-V Supply

- $-40^{\circ}\text{C}$  to  $100^{\circ}\text{C}$  Operation
- Surface Mount 3-mm x 3-mm 16-Pin RoHS Compliant QFN Package

### APPLICATIONS

- SONET OC-192/SDH STM-64 Optical Transmitters
- 10-Gigabit Ethernet Optical Transmitters
- SFP+ and XFP Transceiver Modules

### DESCRIPTION

The ONET1151M is a high-speed, 3.3-V modulator driver designed to modulate a differentially driven Mach Zehnder Modulator at data rates from 1 Gbps up to 11.35 Gbps.

The output amplitude can be controlled with an externally applied voltage. A 2-wire serial interface allows digital control of the equalizer, output pre-emphasis, eye crossing point, rise and fall times, and the amplitude, eliminating the need for external components. Output waveform control, in the form of pre-emphasis, cross-point adjustment and rise and fall time adjustment are available to improve the optical eye mask margin.

An optional input equalizer with 10 dB of boost at 5 GHz can be used for equalization of up to 300-mm (12 in.) of microstrip or stripline transmission line on FR4 printed circuit boards.

The modulator driver is characterized for operation from  $-40^{\circ}\text{C}$  to  $100^{\circ}\text{C}$  case temperature and is available in a small footprint 3-mm x 3-mm 16-pin RoHS compliant QFN package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

$I^2C$  is a trademark of Philips Semiconductor Inc.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### BLOCK DIAGRAM

Figure 1 shows a simplified block diagram of the ONET1151M. The modulator driver consists of an equalizer, a limiter, an output driver, power-on reset circuitry, a 2-wire serial interface including a control logic block, a modulation current generator, and an analog reference block.

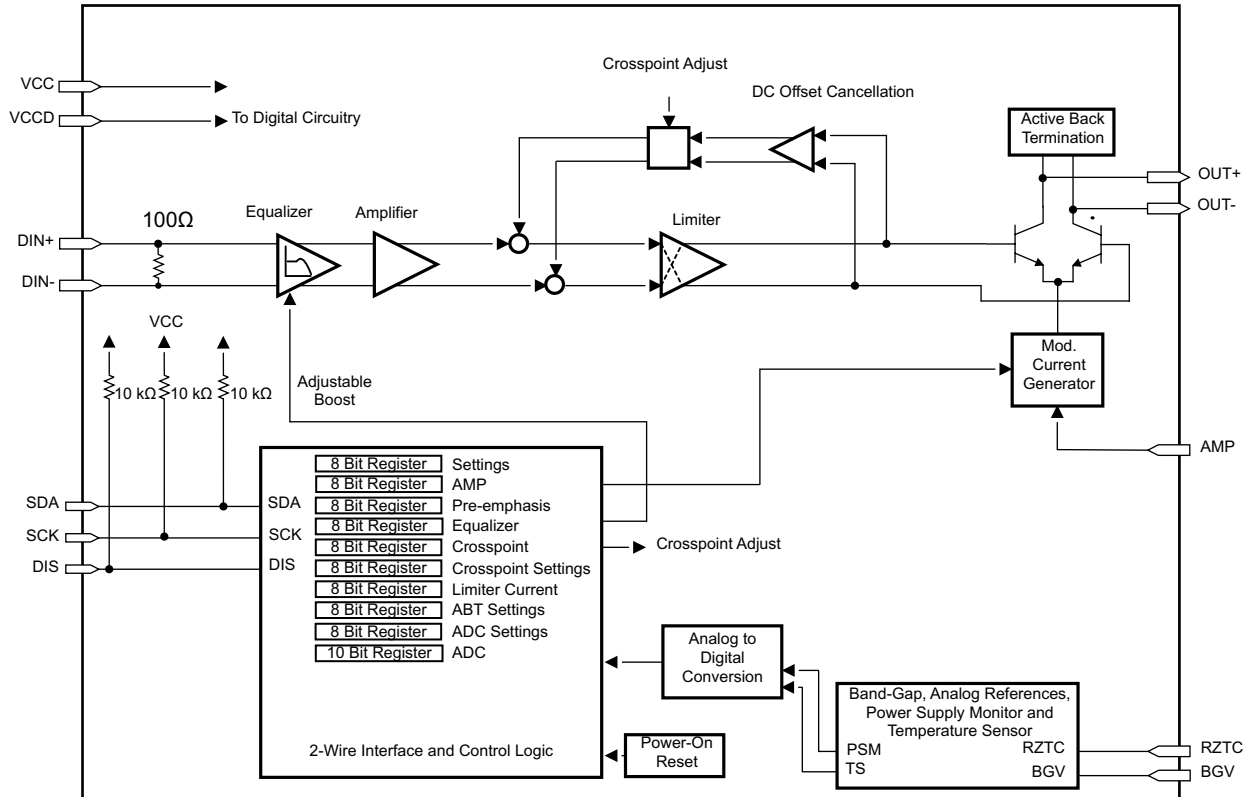

Figure 1. Simplified Block Diagram of the ONET1151M

## PACKAGE

The ONET1151M is packaged in a small footprint 3-mm x 3-mm 16-pin RoHS compliant QFN package with a lead pitch of 0.5 mm.

Figure 2. 16-Pin QFN Package, 3-mm x 3-mm (Top View)

Table 1. PIN DESCRIPTIONS

PIN		TYPE	DESCRIPTION
NAME	NO.		
DIS	1	Digital-in	Disables bias, modulation, and peaking currents when set to high state. Includes a 10-kΩ or 40-kΩ pullup resistor to VCC.
VCCD	2	Supply	3.3 V ± 10% supply voltage for the digital logic. Connect to VCC.
SCK	3	Digital-in	2-wire interface serial clock. Includes a 10-kΩ or 40-kΩ pullup resistor to VCC.
SDA	4	Digital-in/out	2-wire interface serial data input. Includes a 10-kΩ or 40-kΩ pullup resistor to VCC.
GND	5, 8, 12	Supply	Circuit ground
DIN+	6	Analog-in	Non-inverted data input. On-chip differentially 100-Ω terminated to DIN-. Must be AC coupled.
DIN-	7	Analog-in	Inverted data input. On-chip differentially 100-Ω terminated to DIN+. Must be AC coupled.
RZTC	9	Analog	Connect external zero TC 28.7-kΩ resistor to ground (GND). Used to generate a defined zero TC reference current for internal DACs.
BGV	10	Analog-out	Buffered bandgap voltage with 1.16-V output. This is a replica of the bandgap voltage at RZTC.
AMP	11	Analog-in	Output amplitude control. Output amplitude can be adjusted by applying a voltage of 0 to 2.5 V to this pin.
VCC	13, 16	Supply	3.3 V ± 10% supply voltage. Connect to VCCD.
OUT-	14	CML-out (current)	Inverted data output
OUT+	15	CML-out (current)	Non-inverted data output
EP	EP	Thermal	Exposed die pad (EP) must be grounded.

## ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

PARAMETER		VALUE		UNIT
		MIN	MAX	
$V_{CC}$	Supply voltage <sup>(2)</sup>	-0.3	4	V
$V_{DIS}$ , $V_{RZTC}$ , $V_{SCK}$ , $V_{SDA}$ , $V_{BGV}$ , $V_{AMP}$ , $V_{DIN+}$ , $V_{DIN-}$ , $V_{OUT+}$ , $V_{OUT-}$	Voltage at DIS, RZTC, SCK, SDA, BGV, AMP, DIN+, DIN-, OUT+, OUT- <sup>(2)</sup>	-0.3	4	V
$I_{DIN-}$ , $I_{DIN+}$	Max. current at input pins		25	mA
$I_{MOD+}$ , $I_{MOD-}$	Max. current at output pins		35	mA
ESD	ESD rating at all pins except OUT+ and OUT-		2	kV (HBM)
	ESD rating at OUT+ and OUT-		1.5	kV (HBM)
$T_{J, max}$	Maximum junction temperature		125	°C
$T_{STG}$	Storage temperature range	-65	150	°C
$T_C$	Case temperature	-40	110	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute–maximum–rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.

## RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range (unless otherwise noted)

PARAMETER	CONDITION	VALUE			UNIT
		MIN	TYP	MAX	
$V_{CC}$	Supply voltage	2.97	3.3	3.63	V
$V_{IH}$	Digital input high voltage	2			V
$V_{IL}$	Digital input low voltage	0.8			V
$R_{RZTC}$	Zero TC resistor value <sup>(1)</sup>	28.4	28.7	29	k $\Omega$
$V_{IN}$	Differential input voltage swing	150		1200	mV <sub>p-p</sub>
$V_{AMP}$	Amplitude control input voltage range	0		2.5	V
$t_{R-IN}$	Input rise time	20%–80%		30	ps
$t_{F-IN}$	Input fall time	20%–80%		30	ps
$T_C$	Temperature at thermal pad	-40		100	°C

- (1) Changing the value alters the DAC ranges and the current consumption.

## DC ELECTRICAL CHARACTERISTICS

over recommended operating conditions with 50-Ω output load,  $V_{OUT+} = 1.5 V_{PP}$  and  $R_{RZTC} = 28.7 \text{ k}\Omega$ , unless otherwise noted. Typical operating condition is at 3.3 V and  $T_A = 25^\circ\text{C}$

PARAMETER	CONDITION	VALUE			UNIT
		MIN	TYP	MAX	
$V_{CC}$	Supply voltage	2.97	3.3	3.63	V
$I_{VCC}$	Supply current	$V_{CC} = 3.47 \text{ V}$ , PKENA = 1			100
		$V_{CC} = 3.63 \text{ V}$ , PKENA = 1			105
P	Power Dissipation	$V_{CC} = 3.47 \text{ V}$ , PKENA = 1			347
		$V_{CC} = 3.63 \text{ V}$ , PKENA = 1			381
$R_{IN}$	Data input resistance	Differential between DIN+ / DIN-			Ω
$I_{IH}$	High level digital input current	SCK, SDA, DIS set to $V_{CC}$ <sup>(1)</sup>			μA
$I_{IL}$	Low level digital input current	SCK, SDA, DIS set to GND <sup>(1)</sup>			μA
$V_{CC-RST}$	$V_{CC}$ reset threshold voltage	$V_{CC}$ voltage level which triggers power-on reset			V
$V_{CC-RSTHYS}$	$V_{CC}$ reset threshold voltage hysteresis				mV

(1) Assured by simulation over process, supply and temperature variation

## AC ELECTRICAL CHARACTERISTICS

over recommended operating conditions with 50-Ω output load,  $V_{OUT+} = 1.5 V_{PP}$  and  $R_{RZTC} = 28.7 \text{ k}\Omega$  unless otherwise noted. Typical operating condition is at  $V_{CC} = 3.3 \text{ V}$  and  $T_A = 25^\circ\text{C}$ .

PARAMETER	CONDITION	VALUE			UNIT
		MIN	TYP	MAX	
	Data rate				Gbps
SDD11	Differential input return gain	0.01 GHz < f < 5 GHz			-15
		5 GHz < f < 11.1 GHz			-8
SCD11	Differential to common mode conversion gain	0.01 GHz < f < 11.1 GHz			dB
$V_{O-MIN}$	Minimum output amplitude	50-Ω load, single-ended			mV <sub>PP</sub>
$V_{O-MAX}$	Maximum output amplitude	50-Ω load, single-ended, OASH0 = OASH1 = 0			V <sub>PP</sub>
	Output amplitude stability	50-Ω load, single-ended			mV
$t_{R-OUT}$	Output rise time	20% – 80%, $t_{R-IN} < 40 \text{ ps}$ , 50-Ω load, single-ended, cross point = 50%. <sup>(1)</sup>			ps
$t_{F-OUT}$	Output fall time	20% – 80%, $t_{F-IN} < 40 \text{ ps}$ , 50-Ω load, single-ended, cross point = 50%. <sup>(1)</sup>			ps
ISI	Intersymbol interference <sup>(2)</sup>	EQENA = 0, K28.5 pattern at 11.35 Gbps, 150-mV <sub>PP</sub> , 600-mV <sub>PP</sub> , 1200-mV <sub>PP</sub> differential input voltage, single-ended output. $750 \text{ mV}_{PP} \leq V_{OUT} \leq 1.5 V_{PP}$			ps <sub>p-p</sub>
		EQENA = 1, K28.5 pattern at 11.35 Gbps with 12-inch transmission line at the input, 150-mV <sub>PP</sub> , 600-mV <sub>PP</sub> , 1200-mV <sub>PP</sub> input to transmission line, single-ended output. $750 \text{ mV}_{PP} \leq V_{OUT} \leq 1.5 V_{PP}$ .			
RJ	Random output jitter	EQENA = 0			ps <sub>RMS</sub>
	High cross point control range	50-Ω load, single-ended			%
	Low cross point control range	50-Ω load, single-ended			%

(1) 1010 pattern with PKENA = 1 and PEADJ (Register 2) set to 0x0F.

(2) Jitter at the eye crossing point.

### AC ELECTRICAL CHARACTERISTICS (continued)

over recommended operating conditions with 50-Ω output load,  $V_{OUT+} = 1.5 V_{PP}$  and  $R_{RZTC} = 28.7 \text{ k}\Omega$  unless otherwise noted. Typical operating condition is at  $V_{CC} = 3.3 \text{ V}$  and  $T_A = 25^\circ\text{C}$ .

PARAMETER	CONDITION	VALUE			UNIT
		MIN	TYP	MAX	
Cross point stability	50-Ω load, single-ended, $V_{IN} = 180 \text{ mV}_{PP}$ , $600 \text{ mV}_{PP}$ and $1200 \text{ mV}_{PP}$ , $V_{OUT} = 1.2 V_{PP}$		±5		pp
Cross point stability vs. input amplitude	50-Ω load, single-ended, $V_{IN} = 180 \text{ mV}_{PP}$ , $600 \text{ mV}_{PP}$ and $1200 \text{ mV}_{PP}$ , $V_{OUT} = 1.2 V_{PP}$	-6		6	pp
$BW_{AMP}$ Bandwidth of AMP input			2.5		kHz
$T_{OFF}$ Transmitter disable time	Rising edge of DIS to $V_{OUT+} \leq 0.15 V_{PP}$ <sup>(3)</sup>		0.05	5	μs
$T_{ON}$ Disable negate time	Falling edge of DIS to $V_{OUT+} \geq 1.2 V_{PP}$ <sup>(3)</sup>			1	ms
$T_{INIT1}$ Power-on to initialize	Power-on to registers ready to be loaded <sup>(3)</sup>		1	10	ms
$T_{INIT2}$ Initialize to transmit	Register load STOP command to part ready to transmit valid data <sup>(3)</sup>			2	ms

(3) Assured by simulation over process, supply, and temperature variation.

## DETAILED DESCRIPTION

### EQUALIZER

The data signal is applied to an input equalizer by means of the input signal pins DIN+ / DIN–, which provide on-chip differential 100-Ω line-termination. The equalizer is enabled by setting EQENA to 1 (bit 1 of register 0). Equalization of up to 300-mm (12 in.) of microstrip or stripline transmission line on FR4 printed circuit boards can be achieved. The amount of equalization is digitally controlled by the 2-wire interface and control logic block and is dependant on the register settings EQADJ[0..7] (register 3). The equalizer can be turned off and bypassed by setting EQENA to 0. For details about the equalizer settings, see [Table 16](#).

### LIMITER

By limiting the output signal of the equalizer to a fixed value, the limiter removes any overshoot after the input equalization and provides the input signal for the output driver. Adjustments to the limiter bias current and emitter follower current can be made to trade off the rise and fall times and supply current. The limiter bias current is adjusted through LIMCSGN (bit 7 of register 6) and LIMC[0..2] (bits 4, 5 and 6 of register 6). The emitter follower current is adjusted through EFCSGN (bit 3 of register 6) and EFC[0..2] (bits 0, 1 and 2 of register 6). In addition, the slope of the emitter follower current can be modified with the EFCRNG bit (bit 3 of register 5). Setting EFCRNG to 1 results in a steeper slope.

### HIGH-SPEED OUTPUT DRIVER

The modulation current is sunk from the common emitter node of the limiting output driver differential pair by means of a modulation current generator, which is digitally controlled by the 2-wire serial interface. The collector nodes of the output stages are connected to the output pins OUT+ and OUT–. The collectors have internal active back termination. The outputs are optimized to drive a 50-Ω single-ended load and to obtain the maximum single-ended output voltage of 1.5 V<sub>PP</sub>. AC coupling and inductive pullups to VCC are required. The active back termination emitter follower current is adjusted through ABTSGN (bit 3 of register 7) and ABTEF[0..2] (bits 0, 1 and 2 of register 7). ABTUP (bit 7 of register 7) and ABTDWN (bit 6 of register 7) can control the active back termination auxiliary buffer amplitude. Setting ABTUP to 1 increases the amplitude and setting ABTDWN to 1 decreases the amplitude. For most instances, these settings may be left in the default mode.

For waveform shaping, output pre-emphasis can be enabled by setting PKENA to 1 (bit 5 of register 0) and adjusting the peaking height through PEADJ[0..3] (register 2).

In addition, the polarity of the output pins can be inverted by setting the output polarity switch bit, POL (bit 2 of register 0) to 1.

### MODULATION CURRENT GENERATOR

The modulation current generator provides the current for the current modulator described above. The modulation current generator is controlled by applying an analog voltage in the range of 0 to 2.5 V to the AMP pin, or it can be digitally controlled by the 2-wire interface block. The default method of control is through the AMP pin. To digitally control the output amplitude set AMPCTRL (bit 0 of register 0) to 1.

An 8-bit wide control bus, AMP[0..7] (register 1), can be used to set the desired modulation current, and therefore, the output voltage.

To decrease the output amplitude by approximately 18% set OARNG to 1 (bit 7 of register 5), to increase it by approximately 30 mV<sub>PP</sub> set OASH0 (bit 5 of register 5) to 1, or to increase it by approximately 60 mV<sub>PP</sub> set OASH1 (bit 6 of register 5) to 1.

The modulation current, and therefore the output signal, can be disabled by setting the DIS input pin to a high level or by setting ENA to 0 (bit 7 of register 0).

## DC OFFSET CANCELLATION AND CROSS POINT CONTROL

The ONET1151M has DC offset cancellation to compensate for internal offset voltages. The offset cancellation can be disabled and the eye crossing point adjustment enabled by setting CPENA to 1 (bit 3 of register 0). The crossing point can be moved toward the one level by setting CPSGN to 0 (bit 7 of register 4) and it can be moved toward the zero level by setting CPSGN to 1. The percentage of shift depends upon the register settings CPADJ[0..6] (register 4) and the high cross point adjustment range bits HICP[0..1] (bits 0 and 1 of register 5). Setting HICP0 and HICP1 to 1 results in the maximum adjustment range but increases the supply current.

## ANALOG REFERENCE AND TEMPERATURE SENSOR

The ONET1151M modulator driver is supplied by a single 3.3-V  $\pm$  10% supply voltage connected to the VCC and VCCD pins. This voltage is referred to ground (GND) and can be monitored as a 10-bit unsigned digital word through the 2-wire interface.

On-chip bandgap voltage circuitry generates a reference voltage, independent of the supply voltage, from which all other internally required voltages and bias currents are derived.

An external zero temperature coefficient resistor must be connected from the RZTC pin of the device to ground. This resistor is used to generate a precise, zero-TC current which is required as a reference current for the on-chip DACs.

In order to minimize the module component count, the ONET1151M provides an on-chip temperature sensor. The temperature can be monitored as a 10-bit unsigned digital word through the 2-wire interface.

## POWER-ON RESET

The ONET1151M has power on reset circuitry which ensures that all registers are reset to zero during startup. After the power-on to initialize time ( $t_{INIT1}$ ), the internal registers are ready to be loaded. The part is ready to transmit data after the initialize to transmit time ( $t_{INIT2}$ ), assuming that the chip enable bit ENA is set to 1 and the disable pin DIS is low. The DIS pin has an internal 10-k $\Omega$  pullup resistor so the pin must be pulled low to enable the outputs.

The ONET1151M can be disabled using either the ENA control register bit or the disable pin DIS. In both cases the internal registers are not reset. After the disable pin DIS is set low and/or the enable bit ENA is set back to 1, the part returns to its prior output settings.

## ANALOG TO DIGITAL CONVERTER

The ONET1151M has an internal 10-bit analog to digital converter (ADC) that converts the analog monitors for temperature and power supply voltage into a 10-bit unsigned digital word. The first eight most significant bits (MSBs) are available in register 14 and the two least significant bits (LSBs) are available in register 15. Depending on the accuracy required, eight bits or 10 bits can be read. However, due to the architecture of the 2-wire interface, in order to read the two registers, two separate read commands have to be sent.

The ADC is enabled by default. To monitor a particular parameter, select the parameter with ADCSEL (bit 0 of register 13). [Table 2](#) lists the ADCSEL bits and the monitored parameters.

**Table 2. ADC Selection Bits and the Monitored Parameter**

ADCSEL	Monitored Parameter
0	Temperature
1	Supply voltage

If it is not desired to use the ADC to monitor the two parameters then the ADC can be disabled by setting ADCDIS to 1 (bit 7 of register 13) and OSCDIS to 1 (bit 6 of register 13).

The digital word read from the ADC can be converted to its analog equivalent through the following formulas:

Temperature without a mid point calibration:

$$\text{Temperature (}^{\circ}\text{C)} = \frac{(\text{ADCx} - 264)}{6}$$

Temperature with a mid point calibration:

$$\text{Temperature (}^\circ\text{C)} = \frac{(T\_cal (^\circ\text{C}) + 273) \times (\text{ADCx} + 1362)}{(\text{ADC\_cal} + 1362) - 273}$$

Power supply voltage:

$$\text{Power supply voltage (V)} = \frac{2.25 \times (\text{ADCx} + 1380)}{1409}$$

## 2-WIRE INTERFACE AND CONTROL LOGIC

The ONET1151M uses a 2-wire serial interface for digital control. For example, the two circuit inputs, SDA and SCK, are respectively driven by the serial data and serial clock from a microprocessor. The SDA and SCK pins have internal 10-k $\Omega$  pullups to VCC. If a common interface is used to control multiple parts, the internal pullups can be set to 40 k $\Omega$  by setting HITERM to 1 (bit 6 of register 0). The internal pullup for the DIS pin is also set to 40 k $\Omega$  when HITERM is set to 1.

The 2-wire interface allows write access to the internal memory map to modify control registers and read access to read out the control signals. The ONET1151M is a slave device only which means that it cannot initiate a transmission itself; it always relies on the availability of the SCK signal for the duration of the transmission. The master device provides the clock signal as well as the START and STOP commands. The protocol for a data transmission is as follows:

1. START command
2. 7-bit slave address (0001000) followed by an eighth bit which is the data direction bit (R/W). A zero indicates a WRITE and a 1 indicates a READ.
3. 8-bit register address
4. 8-bit register data word
5. STOP command

Regarding timing, the ONET1151M is I<sup>2</sup>C™ compatible. The typical timing is shown in [Figure 3](#) and complete data write and read transfers are shown in [Figure 4](#). Parameters for [Figure 3](#) are defined in [Table 3](#).

**Bus Idle:** Both SDA and SCK lines remain HIGH.

**Start Data Transfer:** A START condition (S) is defined by a change in the state of the SDA line from HIGH to LOW while the SCK line is HIGH. Each data transfer is initiated with a START condition.

**Stop Data Transfer:** A STOP condition (P) is defined by a change in the state of the SDA line from LOW to HIGH while the SCK line is HIGH. Each data transfer is terminated with a STOP condition. However, if the master still wishes to communicate on the bus, it can generate a repeated START condition and address another slave without first generating a STOP condition.

**Data Transfer:** Only one data byte can be transferred between a START and a STOP condition. The receiver acknowledges the transfer of data.

**Acknowledge:** Each receiving device, when addressed, is obligated to generate an acknowledge bit. The transmitter releases the SDA line and a device that acknowledges must pull down the SDA line during the acknowledge clock pulse in such a way that the SDA line is stable LOW during the HIGH period of the acknowledge clock pulse. Setup and hold times must be taken into account. When a slave-receiver does not acknowledge the slave address, the data line must be left HIGH by the slave. The master can then generate a STOP condition to abort the transfer. If the slave-receiver does acknowledge the slave address but some time later in the transfer cannot receive any more data bytes, the master must abort the transfer. This is indicated by the slave generating the not acknowledge on the first byte to follow. The slave leaves the data line HIGH and the master generates the STOP condition.

Figure 3. I<sup>2</sup>C Timing Diagram

Table 3. Timing Diagram Definitions

Parameter	Symbol	Min	Max	Unit
SCK clock frequency	$f_{SCK}$		400	kHz
Bus free time between STOP and START conditions	$t_{BUF}$	1.3		$\mu$ s
Hold time after repeated START condition. After this period, the first clock pulse is generated	$t_{HDSTA}$	0.6		$\mu$ s
Low period of the SCK clock	$t_{LOW}$	1.3		$\mu$ s
High period of the SCK clock	$t_{HIGH}$	0.6		$\mu$ s
Setup time for a repeated START condition	$t_{SUSTA}$	0.6		$\mu$ s
Data HOLD time	$t_{HDDAT}$	0		$\mu$ s
Data setup time	$t_{SUDAT}$	100		ns
Rise time of both SDA and SCK signals	$t_R$		300	ns
Fall time of both SDA and SCK signals	$t_F$		300	ns
Setup time for STOP condition	$t_{SUSTO}$	0.6		$\mu$ s

APPLICATION INFORMATION

Figure 5 shows a typical application circuit using the ONET1151M. The modulator must be AC coupled to the driver for proper operation. The output amplitude is controlled through the AMP pin and the rest of the functions are controlled through the 2-wire interface (SDA or SCK) by a microcontroller.

Pullup inductors from MOD+ and MOD- to VCC are required.

Figure 5. Differential AC Coupled Drive

Layout Guidelines

For optimum performance, use 50-Ω transmission lines (100-Ω differential) for connecting the signal source to the DIN+ and DIN- pins and 50-Ω transmission lines (100-Ω differential) for connecting the OUT+ and OUT- modulation current outputs to the modulator. The length of the transmission lines should be kept as short as possible to reduce loss and pattern-dependent jitter.

In addition, VCCD can be connected to VCC and filtered from a common supply.

### TYPICAL CHARACTERISTICS

Typical operating condition is at  $V_{CC} = 3.3\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $V_{OUT} = 1.5\text{ V}_{PP}$  single ended, EQENA = 0, PKENA = 1 with PEADJ = 0x0F and  $V_{IN} = 600\text{ mV}_{PP}$  (unless otherwise noted).

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
ONET1151MRGTR	ACTIVE	VQFN	RGT	16	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 100	1151M	<a href="#">Samples</a>
ONET1151MRGTT	ACTIVE	VQFN	RGT	16	250	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 100	1151M	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

\*All dimensions are nominal

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
