

## PCM1808 Single-Ended, Analog-Input 24-Bit, 96-kHz Stereo ADC

### 1 Features

- 24-Bit Delta-Sigma Stereo A/D Converter (ADC)
- Single-Ended Voltage Input: 3 V<sub>p-p</sub>
- High Performance:
  - THD+N: –93 dB (Typical)
  - SNR: 99 dB (Typical)
  - Dynamic Range: 99 dB (Typical)
- Oversampling Decimation Filter:
  - Oversampling Frequency: x64
  - Pass-Band Ripple: ±0.05 dB
  - Stop-Band Attenuation: –65 dB
  - On-Chip High-Pass Filter: 0.91 Hz (48 kHz)
- Flexible PCM Audio Interface
  - Master- or Slave-Mode Selectable
  - Data Formats: 24-Bit I<sup>2</sup>S, 24-Bit Left-Justified
- Power Down and Reset by Halting System Clock
- Analog Antialias LPF Included
- Sampling Rate: 8 kHz–96 kHz
- System Clock: 256 f<sub>S</sub>, 384 f<sub>S</sub>, 512 f<sub>S</sub>
- Resolution: 24 Bits
- Dual Power Supplies:
  - 5-V for Analog
  - 3.3-V for Digital
- Package: 14-Pin TSSOP

### 2 Applications

- DVD Recorder
- Digital TV
- AV Amplifier or Receiver
- MD Player
- CD Recorder
- Multitrack Receiver
- Electric Musical Instrument

### 3 Description

The PCM1808 device is a high-performance, low-cost, single-chip, stereo analog-to-digital converter with single-ended analog voltage input. The PCM1808 device uses a delta-sigma modulator with 64-times oversampling and includes a digital decimation filter and high-pass filter that removes the dc component of the input signal. For various applications, the PCM1808 device supports master and slave mode and two data formats in serial audio interface.

The PCM1808 device supports the power-down and reset functions by means of halting the system clock.

The PCM1808 device is suitable for wide variety of cost-sensitive consumer applications requiring good performance and operation with a 5-V analog supply and 3.3-V digital supply. Fabrication of the PCM1808 device uses a highly advanced CMOS process. The device is available in a small, 14-pin TSSOP package.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
PCM1808	TSSOP (14)	4.40 mm x 5.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

### Pin Functions

PIN		I/O	DESCRIPTION
NAME	PIN		
AGND	2	—	Analog GND
BCK	8	I/O	Audio-data bit-clock input or output <sup>(1)</sup>
DGND	5	—	Digital GND
DOUT	9	O	Audio-data digital output
FMT	12	I	Audio-interface format select <sup>(2)</sup>
LRCK	7	I/O	Audio-data latch-enable input or output <sup>(1)</sup>
MD0	10	I	Audio-interface mode select 0 <sup>(2)</sup>
MD1	11	I	Audio-interface mode select 1 <sup>(2)</sup>
SCKI	6	I	System clock input; 256 f <sub>S</sub> , 384 f <sub>S</sub> or 512 f <sub>S</sub> <sup>(3)</sup>
V <sub>CC</sub>	3	—	Analog power supply, 5-V
V <sub>DD</sub>	4	—	Digital power supply, 3.3-V
V <sub>INL</sub>	13	I	Analog input, L-channel
V <sub>INR</sub>	14	I	Analog input, R-channel
V <sub>REF</sub>	1	—	Reference-voltage decoupling (= 0.5 V <sub>CC</sub> )

(1) Schmitt-trigger input with internal pulldown (50-kΩ, typical)

(2) Schmitt-trigger input with internal pulldown (50-kΩ, typical), 5-V tolerant

(3) Schmitt-trigger input, 5-V tolerant

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating ambient temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Analog supply voltage	-0.3	6.5	V
V <sub>DD</sub>	Digital supply voltage	-0.3	4	V
	Ground voltage differences	AGND, DGND		±0.1 V
	Digital input voltage	LRCK, BCK, DOUT		-0.3 (V <sub>DD</sub> + 0.3 V) < 4 V
		SCKI, MD0, MD1, FMT		-0.3 6.5 V
V <sub>INL</sub> , V <sub>INR</sub> , V <sub>REF</sub>	Analog input voltage	-0.3 (V <sub>CC</sub> + 0.3 V) < 6.5		V
	Input current (any pins except supplies)		±10	mA
T <sub>J</sub>	Junction temperature		150	°C
T <sub>stg</sub>	Storage temperature	-55	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±4000
		Charged-device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating ambient temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Analog supply voltage (see <a href="#">Power Supply Recommendations</a> )	4.5	5	5.5	V
V <sub>DD</sub>	Digital supply voltage	2.7	3.3	3.6	V
	Analog input voltage, full scale (-0 dB)	V <sub>CC</sub> = 5 V		3	V <sub>p-p</sub>
V <sub>IH</sub> <sup>(1)</sup>	High input logic level	2		V <sub>DD</sub>	VDC
V <sub>IL</sub> <sup>(1)</sup>	Low input logic level	0		0.8	VDC
V <sub>IH</sub> <sup>(2) (3)</sup>	High input logic level	2		5.5	VDC
V <sub>IL</sub> <sup>(2) (3)</sup>	Low input logic level	0		0.8	VDC
	Digital input logic family	TTL compatible			
	Digital input clock frequency, system clock	2.048		49.152	MHz
	Digital input clock frequency, sampling clock	8		96	kHz
	Digital output load capacitance			20	pF
T <sub>A</sub>	Operating ambient temperature range	-40		85	°C
T <sub>J</sub>	Junction temperature			150	°C

- (1) Pins 7, 8: LRCK, BCK (Schmitt-trigger input, with 50-kΩ typical pulldown resistor, in slave mode)  
 (2) Pin 6: SCKI (Schmitt-trigger input, 5-V tolerant)  
 (3) Pins 10–12: MD0, MD1, FMT (Schmitt-trigger input, with 50-kΩ typical pulldown resistor, 5-V tolerant)

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		PCM1808	
		PW (TSSOP)	
		14 PINS	
Symbol	Description	Value	Unit
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	89.4	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	25.6	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	30.3	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	1.4	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	29.8	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics

All specifications at T<sub>A</sub> = 25°C, V<sub>CC</sub> = 5 V, V<sub>DD</sub> = 3.3 V, master mode, f<sub>S</sub> = 48 kHz, system clock = 512 f<sub>S</sub>, 24-bit data, unless otherwise noted

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Resolution			24		Bits
<b>DATA FORMAT</b>

		$f_S = 96\text{ kHz}$ <sup>(6)</sup>		77		
		Powered down <sup>(8)</sup>		500		$\mu\text{W}$

(5) Testing of analog performance specifications uses an audio measurement system by Audio Precision™ with 400-Hz HPF and 20-kHz LPF in RMS mode.

(6)  $f_S = 96\text{ kHz}$ , system clock =  $256 f_S$ .

(7) Minimum load on LRCK (pin 7), BCK (pin 8), DOUT (pin 9)

(8) Power-down and reset functions enabled by halting SCK1, BCK, LRCK.

## 6.6 Timing Requirements

	MIN	NOM	MAX	UNIT
<b>SYSTEM CLOCK TIMING</b>				
$t_{w(SCKH)}$ System clock pulse duration, HIGH	8			ns
$t_{w(SCKL)}$ System clock pulse duration, LOW	8			ns
System clock duty cycle	40%		60%	
<b>CLOCK-HALT POWER-DOWN AND RESET TIMING</b>				
$t_{(CKR)}$ Delay time from SCKI halt to internal reset	4			$\mu$ s
$t_{(RST)}$ Delay time from SCKI resume to reset release			1024 SCKI	$\mu$ s
$t_{(REL)}$ Delay time from reset release to DOUT output			8960 / $f_S$	$\mu$ s
<b>AUDIO DATA INTERFACE TIMING (Slave Mode: LRCK and BCK Work as Inputs)<sup>(1)</sup></b>				
$t_{(BCKP)}$ BCK period	1 / (64 $f_S$ )			ns
$t_{(BCKH)}$ BCK pulse duration, HIGH	1.5 $\times t_{(SCKI)}$			ns
$t_{(BCKL)}$ BCK pulse duration, LOW	1.5 $\times t_{(SCKI)}$			ns
$t_{(LRSU)}$ LRCK setup time to BCK rising edge	50			ns
$t_{(LRHD)}$ LRCK hold time to BCK rising edge	10			ns
$t_{(LRCP)}$ LRCH period	10			$\mu$ s
$t_{(CKDO)}$ Delay time, BCK falling edge to DOUT valid	-10		40	ns
$t_{(LRDO)}$ Delay time, LRCK edge to DOUT valid	-10		40	ns
$t_r$ Rise time of all signals			20	ns
$t_f$ Fall time of all signals			20	ns
<b>AUDIO DATA INTERFACE TIMING (Master Mode: LRCK and BCK Work as Outputs)<sup>(2)</sup></b>				
$t_{(BCKP)}$ BCK period	150	1 / (64 $f_S$ )	2000	ns
$t_{(BCKH)}$ BCK pulse duration, HIGH	65		1200	ns
$t_{(BCKL)}$ BCK pulse duration, LOW	65		1200	ns
$t_{(CKLR)}$ Delay time, BCK falling edge to LRCK valid	-10		20	ns
$t_{(LRCP)}$ LRCK period	10	1 / $f_S$	125	ns
$t_{(CKDO)}$ Delay time, BCK falling edge to DOUT valid	-10		20	ns
$t_{(LRDO)}$ Delay time, LRCK edge to DOUT valid	-10		20	ns
$t_r$ Rise time of all signals			20	ns
$t_f$ Fall time of all signals			20	ns
<b>AUDIO CLOCK INTERFACE TIMING (Master Mode: BCK Work as Outputs)<sup>(3)</sup></b>				
$t_{(SCKBCK)}$ Delay time, SCKI rising edge to BCK edge	5		30	ns

- (1) Timing measurement reference level is 1.4 V for input and 0.5  $V_{DD}$  for output. Rise and fall times are from 10% to 90% of the input-output signal swing. Load capacitance of DOUT is 20 pF.  $t_{(SCKI)}$  is the SCKI period.
- (2) Timing measurement reference level is 0.5  $V_{DD}$ . Rise and fall times are from 10% to 90% of the input-output signal swing. Load capacitance of all signals is 20 pF.
- (3) Timing measurement reference level is 1.4 V for input and 0.5  $V_{DD}$  for output. Load capacitance of BCK is 20 pF. This timing applies when SCKI frequency is less than 25 MHz.

## 7 Detailed Description

### 7.1 Overview

The PCM1808 is high-performance, low-cost, single-chip, stereo analog-to-digital converter with single-ended analog voltage input. The PCM1808 uses a delta-sigma modulator with 64-times oversampling and includes a digital decimation filter and high-pass filter that removes the dc component of the input signal. For various applications, the PCM1808 supports master and slave mode and two data formats in serial audio interface up to 96-kHz sampling. These features are controlled through hardware by pulling pins high or low with resistors or a controller GPIO. The PCM1808 also supports a power-down and reset function by means of halting the system clock.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Hardware Control

Pins FMT, MD0, and MD1 allow the device to be controlled by either pullup or pulldown resistors as well as GPIO from a digital IC. These controls allow the option of switching between I<sup>2</sup>S or left-justified, and in which interface mode the device operates.

#### 7.3.2 System Clock

The PCM1808 device supports  $256 f_s$ ,  $384 f_s$ , and  $512 f_s$  as system clock, where  $f_s$  is the audio sampling frequency. The system clock input must be on SCKI (pin 6).

The PCM1808 device has a system-clock detection circuit which automatically senses if the system-clock operation is at  $256 f_s$ ,  $384 f_s$ , or  $512 f_s$  in slave mode. In master mode, control of the system clock frequency must be through the serial control port, which uses MD1 (pin 11) and MD0 (pin 10). An internal circuit automatically divides down the system clock to generate frequencies of  $128 f_s$  and  $64 f_s$ , which operate the digital filter and the delta-sigma modulator, respectively.

[Table 1](#) shows some typical relationships between sampling frequency and system clock frequency, and [Figure 1](#) shows system clock timing.

**Table 1. Sampling Frequency and System Clock Frequency**

SAMPLING FREQUENCY (kHz)	SYSTEM CLOCK FREQUENCY ( $f_{SCLK}$ ) (MHz)		
	$256 f_s$	$384 f_s$	$512 f_s$
8	2.048	3.072	4.096
16	4.096	6.144	8.192
32	8.192	12.288	16.384
44.1	11.2896	16.9344	22.5792

### Feature Description (continued)

Table 1. Sampling Frequency and System Clock Frequency (continued)

SAMPLING FREQUENCY (kHz)	SYSTEM CLOCK FREQUENCY ( $f_{SCLK}$ ) (MHz)		
	$256 f_S$	$384 f_S$	$512 f_S$
48	12.288	18.432	24.576
64	16.384	24.576	32.768
88.2	22.5792	33.8688	45.1584
96	24.576	36.864	49.152

#### 7.3.3 Synchronization With Digital Audio System

In slave mode, the PCM1808 device operates under LRCK (pin 7), synchronized with system clock SCKI (pin 6). The PCM1808 device does not require a specific phase relationship between LRCK and SCKI, but does require the synchronization of LRCK and SCKI.

If the relationship between LRCK and SCKI changes more than  $\pm 6$  BCKs for 64 BCK/frame ( $\pm 5$  BCKs for 48 BCK/frame) during one sample period due to LRCK or SCKI jitter, internal operation of the ADC halts within  $1 / f_S$  and digital output goes to zero data (BPZ code) until resynchronization between LRCK and SCKI occurs.

In the case of changes less than  $\pm 5$  BCKs for 64 BCK/frame ( $\pm 4$  BCKs for 48 BCK/frame), resynchronization does not occur, and the previously described digital output control and discontinuity do not occur.

Figure 23 illustrates the digital output response for loss of synchronization and resynchronization. During undefined data, the PCM1808 device can generate some noise in the audio signal. Also, the transition of normal data to undefined data creates a discontinuity in the digital output data, which can generate some noise in the audio signal. The digital output is valid after resynchronization completes and the time of  $32 / f_S$  has elapsed. Because the fade-in operation is performed, it takes additional time of  $48 / f_{in}$  or  $48 / f_S$  to obtain the level corresponding to the analog input signal. In the case of loss of synchronization during the fade-in or fade-out operation, the operation stops and DOUT (pin 9) goes to zero data immediately. The fade-in operation resumes from mute after the time of  $32 / f_S$  following resynchronization.

Figure 23. ADC Digital Output for Loss of Synchronization and Resynchronization

### 7.3.4 Power On

The PCM1808 device has an internal power-on-reset circuit, and initialization (reset) occurs automatically when the power supply ( $V_{DD}$ ) exceeds 2.2 V (typical). While  $V_{DD} < 2.2$  V (typical), and for 1024 system-clock counts after  $V_{DD} > 2.2$  V (typical), the PCM1808 device stays in the reset state and the digital output remains zero. After release of the reset state,  $8960 / f_S$  seconds must pass before the digital output becomes valid. Because of the performing of the fade-in operation, it takes additional time of  $48 / f_{in}$  or  $48 / f_S$  to obtain the data corresponding to the analog input signal. [Figure 2](#) illustrates the power-on timing and the digital output.

### 7.3.5 Serial Audio Data Interface

The PCM1808 device interfaces the audio system through LRCK (pin 7), BCK (pin 8), and DOUT (pin 9).

#### 7.3.5.1 Interface Mode

MD1 (pin 11) and MD0 (pin 10) select master mode and slave mode as interface modes, both of which the PCM1808 device supports. [Table 2](#) shows the interface-mode selections. It is necessary to set MD1 and MD0 prior to power on.

In master mode, the PCM1808 device provides the timing of serial audio data communications between the PCM1808 device and the digital audio processor or external circuit. While in slave mode, the PCM1808 device receives the timing for data transfer from an external controller.

**Table 2. Interface Modes**

MD1 (PIN 11)	MD0 (PIN 10)	INTERFACE MODE
Low	Low	Slave mode (256 $f_S$ , 384 $f_S$ , 512 $f_S$ autodetection)
Low	High	Master mode (512 $f_S$ )
High	Low	Master mode (384 $f_S$ )
High	High	Master mode (256 $f_S$ )

##### 7.3.5.1.1 Master Mode

In master mode, BCK and LRCK work as output pins, timing which from the clock circuit of the PCM1808 device controls these pins. The frequency of BCK is constant at 64 BCK/frame.

##### 7.3.5.1.2 Slave Mode

In slave mode, BCK and LRCK work as input pins. The PCM1808 device accepts 64-BCK/frame or 48-BCK/frame format (only for a 384- $f_S$  system clock), not 32-BCK/frame format.

### 7.3.5.2 Data Format

**Table 3. Data Format**

FORMAT NO.	FMT (Pin 12)	FORMAT
0	Low	I <sup>2</sup> S, 24-bit
1	High	Left-justified, 24-bit

Format 0: FMT = LOW

24-Bit, MSB-First, I<sup>2</sup>S

Format 1: FMT = HIGH

24-Bit, MSB-First, Left-Justified

**Figure 24. Audio Data Format (LRCK and BCK Work as Inputs in Slave Mode and as Outputs in Master Mode)**

### 7.3.5.3 Interface Timing

Figure 4 and Figure 5 illustrate the interface timing in slave mode and master mode, respectively.

## 7.4 Device Functional Modes

### 7.4.1 Fade-In and Fade-Out Functions

The PCM1808 device has fade-in and fade-out functions on DOUT (pin 9) to avoid pop noise, and the functions come into operation in some cases as described in several following sections. Performance of the level changes from 0 dB to mute or mute to 0 dB employs calculated pseudo S-shaped characteristics with zero-cross detection. Because of the zero-cross detection, the time needed for the fade-in and fade-out depends on the analog input frequency ( $f_{in}$ ). It takes  $48 / f_{in}$  to complete the processing. If there is no zero-cross during  $8192 / f_S$ , a forced DOUT fade-in or fade-out occurs during  $48 / f_S$  (TIME OUT). Figure 25 illustrates the fade-in and fade-out operation processing.

**Figure 25. Fade-In and Fade-Out Operations**

## Device Functional Modes (continued)

### 7.4.2 Clock-Halt Power-Down and Reset Function

The PCM1808 device has a power-down and reset function. Halting SCKI (pin 6) in both master and slave modes triggers this function. The function is available any time after power on. Reset and power down occur automatically 4  $\mu$ s (minimum) after the halt of SCKI. During assertion of the clock-halt reset, the PCM1808 device stays in the reset and power-down mode, with DOUT (pin 9) forced to zero. Release the reset and power-down mode requires the supply of SCKI. The digital output is valid after release of the reset state and elapse of the time of  $1024 \text{ SCKI} + 8960 / f_s$ . Performing the fade-in operation takes additional time of  $48 / f_{in}$  or  $48 / f_s$  to attain the level corresponding to the analog input signal. [Figure 3](#) illustrates the clock-halt reset timing.

To avoid ADC performance degradation, BCK (pin 8) and LRCK (pin 7) must synchronize with SCKI within  $4480 / f_s$  after the resumption of SCKI. If it takes more than  $4480 / f_s$  for BCK and LRCK to synchronize with SCKI, mask SCKI until it again achieves synchronization, taking care of glitch and jitter. See the typical circuit connection diagram, [Figure 26](#).

To avoid ADC performance degradation, assertion of the clock-halt reset is necessary when changing system clock SCKI or the audio interface clocks BCK and LRCK (sampling rate  $f_s$ ) on the fly.

## 8 Application and Implementation

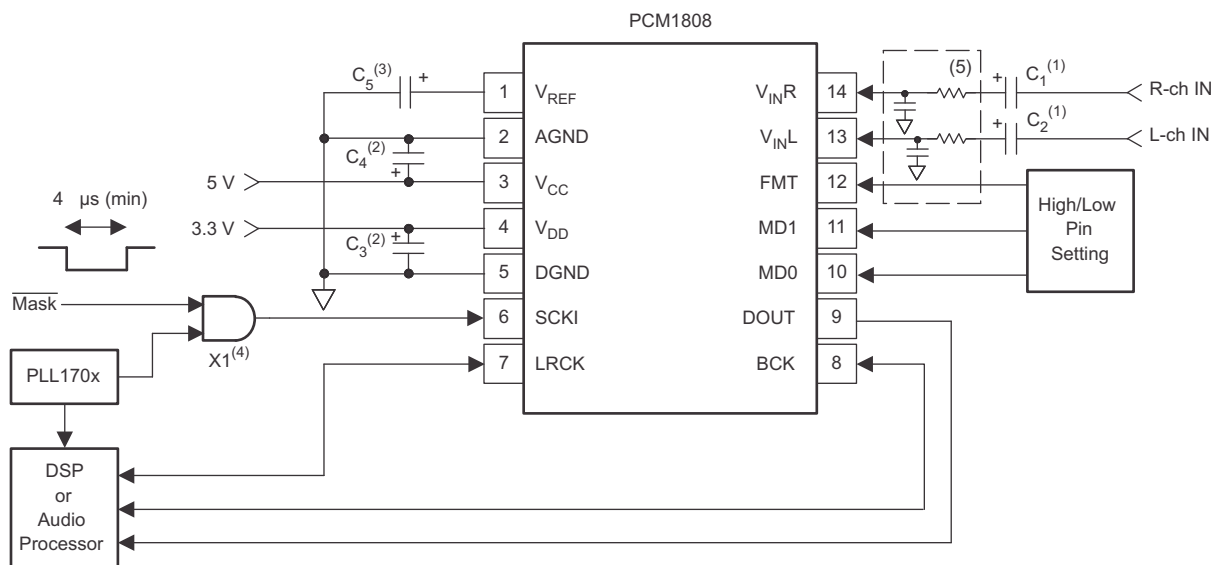

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The PCM1808 device is suitable for wide variety of cost-sensitive consumer applications requiring good performance and operation with a 5-V analog supply and 3.3-V digital supply.

### 8.2 Typical Application

- (1) C1, C2: A 1- $\mu$ F electrolytic capacitor gives 2.7 Hz ( $\tau = 1 \mu\text{F} \times 60 \text{ k}\Omega$ ) cutoff frequency for the input HPF in normal operation and requires a power-on settling time with a 60-ms time constant in the power-on initialization period.
- (2) C3, C4: Bypass capacitors, 0.1- $\mu$ F ceramic and 10- $\mu$ F electrolytic, depending on layout and power supply
- (3) C5: Recommended capacitors are 0.1- $\mu$ F ceramic and 10- $\mu$ F electrolytic.
- (4) X1: X1 masks the system clock input when using the clock-halt reset function with external control.
- (5) Optional external antialiasing filter could be required, depending on the application.

Figure 26. Typical Circuit Connection Diagram

#### 8.2.1 Design Requirements

For this design example, use the parameters listed in Table 4 as the input parameters.

Table 4. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Analog input voltage range	0 Vp-p to 3 Vp-p
Output	PCM audio data
System clock input frequency	2.048 MHz to 49.152 MHz
Output sampling frequency	8 kHz to 96 kHz
Power supply	3.3 V and 5 V

## 8.2.2 Detailed Design Procedure

### 8.2.2.1 Control Pins

The control pins FMT, MD0, and MD1 should be controlled either by biasing with a 10 kΩ resistor to VDD or GND, or by driving with GPIO from the DSP or audio processor.

### 8.2.2.2 Master Clock

In this application of the PCM1808 device, a PLL170X series device is used as the master clock source to drive both the PCM1808 and the DSP or audio processor synchronously. With the addition of the AND gate, the operation of the PCM1808 device can be halted by control of the MASK bit. A crystal that operates at the standard audio multiples can also be used.

### 8.2.2.3 DSP or Audio Processor

In this application, the DSP or audio processor is acting as the audio master, and the PCM1808 is acting as the audio slave. This means the DSP or audio processor must be able to output audio clocks that the PCM1808 can use to process audio signals.

### 8.2.2.4 Input Filters

For the analog input circuit, an ac coupling capacitor should be placed in series with the input. This will remove the dc component of the input signal. An RC filter can also be implemented to filter out-of-band noise to reduce aliasing. The equation below can be used to calculate the cutoff frequency of the optional RC filter for the input.

$$f_c = \frac{1}{2\pi RC} \quad (1)$$

## 8.2.3 Application Curve

**Figure 27. Output Spectrum**

## 9 Power Supply Recommendations

The PCM1808 device requires a 5-V nominal supply and a 3.3-V nominal supply. The 5-V supply is for the analog circuitry powered by the  $V_{CC}$  pin. The 3.3-V supply is for the digital circuitry powered by the  $V_{DD}$  pin. The decoupling capacitors for the power supplies should be placed close to the device terminals.

A  $V_{CC}$  that varies from the nominal 5 V affects the reference voltage for the input. This has a slight impact on the data conversion of the device.

## 10 Layout

### 10.1 Layout Guidelines

#### 10.1.1 $V_{CC}$ , $V_{DD}$ Pins

Bypass the digital and analog power supply lines to the PCM1808 device to the corresponding ground pins with both 0.1- $\mu$ F ceramic and 10- $\mu$ F electrolytic capacitors as close to the pins as possible to maximize the dynamic performance of the ADC.

#### 10.1.2 AGND, DGND Pins

To maximize the dynamic performance of the PCM1808 device, there are no internal connections to the analog and digital grounds. These grounds should have low impedance to avoid digital noise feedback into the analog ground. They should be connected directly to each other under the PCM1808 device package to reduce potential noise problems.

#### 10.1.3 $V_{INL}$ , $V_{INR}$ Pins

$V_{INL}$  and  $V_{INR}$  are single-ended inputs. These inputs have integrated antialias low-pass filters to remove the high-frequency noise outside the audio band. If the performance of these filters is not adequate for an application, the application requires appropriate external antialiasing filters. An appropriate choice would typically be a passive RC filter in the range of 100  $\Omega$  and 0.01  $\mu$ F to 1 k $\Omega$  and 1000 pF.

#### 10.1.4 $V_{REF}$ Pin

To ensure low source impedance of the ADC references, the recommended capacitors between  $V_{REF}$  and AGND are 0.1- $\mu$ F ceramic and 10- $\mu$ F electrolytic. These capacitors should be located as close as possible to the  $V_{REF}$  pin to reduce dynamic errors on the ADC references.

#### 10.1.5 DOUT Pin

The DOUT pin has a large load-drive capability, but if the DOUT line is long, a recommended practice is to locate a buffer near the PCM1808 device and minimize load capacitance to minimize the digital-analog crosstalk and maximize the dynamic performance of the ADC.

#### 10.1.6 System Clock

The quality of the system clock can influence dynamic performance, as the PCM1808 device operates based on a system clock. Therefore, it may be necessary to consider the system clock duty, jitter, and the time difference between system clock transition and BCK or LRCK transition in slave mode.

PCM1808

## 11 Device and Documentation Support

### 11.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 11.2 Trademarks

E2E is a trademark of Texas Instruments.

Audio Precision is a trademark of Audio Precision, Inc.

All other trademarks are the property of their respective owners.

### 11.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 11.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most-current data available for the designated device. This data is subject to change without notice and without revision of this document. For browser-based versions of this data sheet, see the left-hand navigation pane.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
PCM1808PW	ACTIVE	TSSOP	PW	14	90	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	PCM1808	<a href="#">Samples</a>

PCM1808PWR	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	PCM1808	<a href="#">Samples</a>
PCM1808PWRG4	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	PCM1808	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
