|                     | 0.145 at V <sub>GS</sub> = - 1.8 V | 3.6                |                       |  |  |

## 1206-8 ChipFET® (Dual) Marking Code DG Lot Traceability and Date Code Part # Code **Bottom View**

Ordering Information: Si5915BDC-T1-E3 (Lead (Pb)-free) Si5915BDC-T1-GE3 (Lead (Pb)-free and Halogen-free)

#### **FEATURES**

- Halogen-free According to IEC 61249-2-21 **Definition**
- TrenchFET® Power MOSFET
- Low Thermal Resistance
- 40 % Smaller Footprint than TSOP-6
- Compliant to RoHS Directive 2002/95/EC

COMPLIANT HALOGEN **FREE** 

#### **APPLICATIONS**

· Load Switch or Battery Switch for Portable Devices

P-Channel MOSFET P-Channel MOSFET

#### Notes:

- a. Package limited.
- b. Surface mounted on 1" x 1" FR4 board.
- b. Statistic motivities of 17 x 17 F44 board.
  c. t = 5 s.
  d. See Solder Profile (<a href="https://www.vishay.com/ppg?73257">www.vishay.com/ppg?73257</a>). The 1206-8 ChipFET is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper tip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.
  e. Rework conditions: manual soldering with a soldering iron is not recommended for leadless components.
  f. Maximum under steady state conditions is 120 °C/W.

#### Notes:

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

a. Pulse test; pulse width  $\leq$  300  $\mu s,$  duty cycle  $\leq$  2 %.

b. Guaranteed by design, not subject to production testing.

On-Resistance vs. Gate-to-Source Voltage

Single Pulse Power

$$\begin{split} &V_{DS} \text{ - Drain-to-Source Voltage (V)} \\ ^*V_{GS} > &\min \text{mum } V_{GS} \text{ at which } R_{DS(on)} \text{ is specified} \\ &\textbf{Safe Operating Area} \end{split}$$

Vishay Siliconix

### TYPICAL CHARACTERISTICS 25 °C, unless otherwise noted

<sup>\*</sup> The power dissipation  $P_D$  is based on  $T_{J(max)} = 150$  °C, using junction-to-case thermal resistance, and is more useful in settling the upper dissipation limit for cases where additional heatsinking is used. It is used to determine the current rating, when this rating falls below the package limit
