

## FEATURES

- Transceiver for Memory Card Interface [MultiMediaCard (MMC), Secure Digital (SD), Memory Stick™ Compliant Products, SmartMedia Card, and xD-Picture Card™]
- Configurable I/O Switching Levels With Dual-Supply Pins Operating Over Full 1.4-V to 3.6-V Power-Supply Range
- For Low-Power Operation, A Ports Are Placed in High-Impedance State When Card-Side Supply Voltage Is Switched Off
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection for Card-Side Pins (B Port)
  - ±15 kV (±12 kV on Pin 14B) – IEC 61000-4-2 ESD, Air-Gap Discharge
  - ±8 kV – IEC 61000-4-2 ESD, Contact Discharge
- ESD Protection for A-Port Pins (Tested Per JESD 22) Exceeds
  - 2000-V Human-Body Model (A114-B)
  - 1000-V Charged-Device Model (C101)

## DESCRIPTION/ORDERING INFORMATION

The SN74AVCA406 is a transceiver for interfacing microprocessors with MultiMediaCards (MMCs), secure digital (SD) cards, Memory Stick™ compliant products, SmartMedia cards, or xD-Picture Cards™. It integrates high ESD protection, which eliminates the need for external ESD diodes. Two supply-voltage pins allow the A-port and B-port input switching thresholds to be configured separately. The A port is designed to track  $V_{CCA}$ , while the B port is designed to track  $V_{CCB0}$  and  $V_{CCB1}$ .  $V_{CCA}$ ,  $V_{CCB0}$  and  $V_{CCB1}$  can accept any supply voltage from 1.4 V to 3.6 V.

Memory card standards recommend high ESD protection for devices that connect directly to the external memory card. To meet this need, the SN74AVCA406 incorporates ±15-kV air-gap discharge and ±8-kV contact discharge protection on the card side. If  $V_{CCB0}$  and  $V_{CCB1}$  are switched off (no card inserted), the A-port outputs are placed in the high-impedance state to conserve power.

The SN74AVCA406 enables system designers to easily interface low-voltage microprocessors to different memory cards operating at higher voltages. The mode (MODE0 and MODE1) pins are used to configure the device to interface with different types of cards.

The SN74AVCA406 is offered in the 48-ball MicroStar Jr.™ ball grid array (BGA) package. This package has dimensions of 4 × 4 mm, with a 0.5-mm ball pitch for effective board-space savings. Memory cards are widely used in mobile phones, PDAs, digital cameras, personal media players, camcorders, set-top boxes, etc. Low static power consumption and small package size make the SN74AVCA406 an ideal choice for these applications.

## ORDERING INFORMATION

<b>G</b>	V <sub>CCA</sub>	5A	11A	$\overline{CS1}$	8B	6B	V <sub>CCB1</sub>

- (1) V<sub>CCA</sub> powers all A-port I/Os and control inputs.  
 V<sub>CCB0</sub> powers 1B, 2B, 3B, 4B, 9B1, and 10B1.  
 V<sub>CCB1</sub> powers 5B, 6B, 7B, 8B, 9B2, 10B2, 11B, 12B, and 14B.

### Device Operation

The A port is designed to track V<sub>CCA</sub>. V<sub>CCA</sub> accepts any supply voltage from 1.4 V to 3.6 V. The B port is designed to track V<sub>CCB0</sub> and V<sub>CCB1</sub>. V<sub>CCB0</sub> and V<sub>CCB1</sub> can accept any supply voltage from 1.4 V to 3.6 V; however, V<sub>CCB0</sub>, V<sub>CCB1</sub>, or both must be greater than or equal to V<sub>CCA</sub> during normal operation. If V<sub>CCB0</sub> and V<sub>CCB1</sub> are both at GND, the A port is in the high-impedance state. The control pins are supplied by V<sub>CCA</sub>. The microprocessor is connected to the A port, and the memory card(s) are connected to the B port. The device can be configured using MODE0, MODE1, CS0, and CS1 pins to interface with 1-bit, 4-bit, or 8-bit memory cards. Outputs 12A and 14B are push-pull and open drain (OD), respectively, except for NAND flash (XD) mode, where they are open drain and push-pull, respectively.

B6	9B1	CMD.0	Command signal connected to card in slot 0	Output
C6	2B	DAT1.0	Data bit 2 connected to card in slot 0. Referenced to $V_{CCB0}$ .	I/O
D6	11B	DNU	Output pin not used in this mode. Leave unconnected.	Output
E6	10B2	CLK.1	Clock signal connected to card in slot 1	Output
F6	5B	DAT0.1	Data bit 1 connected to card in slot 1. Referenced to $V_{CCB1}$ .	I/O
G6	6B	DAT1.1	Data bit 2 connected to card in slot 1. Referenced to $V_{CCB1}$ .	I/O
A7	$V_{CCB0}$	$V_{CCB0}$	B-port supply voltage. $V_{CCB0}$ powers 1B, 2B, 3B, 4B, 9B1, and 10B1.	Power
B7	1B	DAT0.0	Data bit 1 connected to card in slot 0. Referenced to $V_{CCB0}$ .	I/O
C7	3B	DAT2.0	Data bit 3 connected to card in slot 0. Referenced to $V_{CCB0}$ .	I/O
D7	12B	(tie-low)	Input pin not used in this mode. Tie to GND.	Input
E7	9B2	CMD.1	Command signal connected to card in slot 1	I/O
F7	14B	$\overline{IRQ}$ .h	Open-drain interrupt output for dual SDIO cards configuration. DAT1 is the input for interrupt.	Output
G7	$V_{CCB1}$	$V_{CCB1}$	B-port supply voltage. $V_{CCB1}$ powers 5B, 6B, 7B, 8B, 9B2, 10B2, 11B, 12B, and 14B.	Power

**Configuration 1e - Alternate Method of Interfacing With SD/SDIO Card  
 (SD Mode or SD 4-bit Mode)**

**Table 6. Alternate SD/SDIO Card**

PIN NO.	PIN NAME	SIGNAL NAME OR (CONNECTION)	PIN FUNCTION	PIN TYPE
A1	V <sub>CCA</sub>	V <sub>CCA</sub>	A-port supply voltage. V <sub>CCA</sub> powers all A-port I/Os and control inputs.	Power
B1	10A1	CLK.h	Clock signal from host	Input
C1	9A	CMD.h	Command signal connected to host	I/O
D1	9DIR	CMD-dir.h	Direction control for 9A/9B connected to host	Input
E1	78DIR	(tie-high)	Direction control for 7A/7B and 8A/8B. Not used in this mode. Tie to V <sub>CCA</sub> .	Input
F1	7A	(tie-low)	I/O pin not used in this mode. Tie to GND.	I/O
G1	V <sub>CCA</sub>	V <sub>CCA</sub>	A-port supply voltage. V <sub>CCA</sub> powers all A-port I/Os and control inputs.	Power
A2	2A	DAT1.h	Data bit 2 connected to host. Referenced to V <sub>CCA</sub> .	I/O
B2	3A	DAT2.h	Data bit 3 connected to host. Referenced to V <sub>CCA</sub> .	I/O
C2	10A2	CLK-f.h	Clock feedback to host for resynchronizing data. Used in OMAP processors. Optional on other processors. Leave unconnected if not used.	Output
D2	4A	DAT3.h	Data bit 4 connected to host. Referenced to V <sub>CCA</sub> .	I/O
E2	6A	(tie-low)	I/O pin not used in this mode. Tie to GND.	I/O
F2	8A	(tie-low)	I/O pin not used in this mode. Tie to GND.	I/O
G2	5A	(tie-low)	I/O pin not used in this mode. Tie to GND.	I/O

**Table 6. Alternate SD/SDIO Card (continued)**

PIN NO.	PIN NAME	SIGNAL NAME OR (CONNECTION)	PIN FUNCTION	PIN TYPE
A3	4DIR	DAT3-dir.h	Direction control for 4A/4B	Input
B3	1A	DAT0.h	Data bit 1 connected to host. Referenced to $V_{CCA}$ .	I/O
C3			Depopulated ball	
D3	56DIR	(tie-high)	Direction control for 5A/5B and 6A/6B. Not used in this mode. Tie to $V_{CCA}$ .	Input
E3	GND	GND	Ground	
F3	12A	DNU	Output pin not used in this mode. Do not use. Leave unconnected.	Output
G3	11A	(tie-low)	Input pin not used in this mode. Tie to GND.	Input
A4	2DIR	DAT1-dir.h	Direction control for 2A/2B connected to host	Input
B4	1DIR	DAT0-dir.h	Direction control for 1A/1B connected to host	Input
C4	3DIR	DAT2-dir.h	Direction control for 3A/3B connected to host	Input
D4	GND	GND	Ground	
E4	$\overline{CS0}$	(tie-high)	Card select signal. Not used in this mode. Tie to $V_{CCA}$ for proper operation.	Input
F4	13A	(tie-low)	Input pin not used in this mode. Tie to GND.	Input
G4	$\overline{CS1}$	$\overline{CS1}$	Card select from host. Active low. When $\overline{CS1}$ = high, 1A, 2A, 3A, 4A, 5B, 6B, 7B, 8B, 9A, 9B2, and 10A2 are placed in Hi Z, and 10B1 is low.	Input
A5	MODE1	(tie-low)	MODE1, MODE0 determine mode of operation (see Table 1). Tie to GND in this mode.	Input
B5	MODE0	(tie-low)		Input
C5	GND	GND	Ground	
D5	4B	DNU	I/O pin not used in this mode. Leave unconnected.	I/O
E5	GND	GND	Ground	
F5	7B	DAT2	Data bit 3 connected to card. Referenced to $V_{CCB1}$ .	I/O
G5	8B	DAT3	Data bit 4 connected to card. Referenced to $V_{CCB1}$ .	I/O
A6	10B1	DNU	Output pin not used in this mode. Leave unconnected.	Output
B6	9B1	DNU	Output pin not used in this mode. Leave unconnected.	Output
C6	2B	DNU	I/O pin not used in this mode. Leave unconnected.	I/O
D6	11B	DNU	Output pin not used in this mode. Leave unconnected.	Output
E6	10B2	CLK	Clock signal connected to card	Output
F6	5B	DAT0	Data bit 1 connected to card. Referenced to $V_{CCB1}$ .	I/O
G6	6B	DAT1	Data bit 2 connected to card. Referenced to $V_{CCB1}$ .	I/O
A7	$V_{CCB0}$	(tie-low)	B-port supply voltage. $V_{CCB0}$ powers 1B, 2B, 3B, 4B, 9B1, and 10B1. Not used in this mode. Tie to GND.	Power
B7	1B	DNU	I/O pin not used in this mode. Leave unconnected.	I/O
C7	3B	DNU	I/O pin not used in this mode. Leave unconnected.	I/O
D7	12B	(tie-low)	Input pin not used in this mode. Tie to GND.	Input
E7	9B2	CMD	Command signal connected to card	I/O
F7	14B	DNU	Open-drain output not used in this mode. Leave unconnected.	Output
G7	$V_{CCB1}$	$V_{CCB1}$	B-port supply voltage. $V_{CCB1}$ powers 5B, 6B, 7B, 8B, 9B2, 10B2, 11B, 12B, and 14B.	Power

**Configuration 1f - Interfacing With Memory Stick**

**Table 7. Memory Stick**

PIN NO.	PIN NAME	SIGNAL NAME OR (CONNECTION)	PIN FUNCTION	PIN TYPE
A1	V <sub>CCA</sub>	V <sub>CCA</sub>	A-port supply voltage. V <sub>CCA</sub> powers all A-port I/Os and control inputs.	Power
B1	10A1	SCLK.h	Clock signal from host	Input
C1	9A	BS.h	Bus state connected to host	I/O
D1	9DIR	(tie-high)	Direction control for 9A/9B connected to host. Tie high to make 9A an input, 9B an output.	Input
E1	78DIR	(tie-high)	Direction control for 7A/7B and 8A/8B. Not used in this mode. Tie to V <sub>CCA</sub> .	Input
F1	7A	(tie-low)	I/O pin not used in this mode. Tie to GND.	I/O
G1	V <sub>CCA</sub>	V <sub>CCA</sub>	A-port supply voltage. V <sub>CCA</sub> powers all A-port I/Os and control inputs.	Power

 (2) Translation point  
 (3) 12A is open drain in NAND (XD) mode and push-pull in other modes.

(1) CTRL represents a decoded MODE0, MODE1,  $\overline{\text{CS0}}$ , and  $\overline{\text{CS1}}$  state.

(2) Push-pull in NAND flash (XD) mode and open drain in other modes

### Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage range	V <sub>CCA</sub> , V <sub>CCB</sub>	-0.5	4.6	V
V <sub>I</sub>	Input voltage range <sup>(2)</sup>	I/O ports (A port)	-0.5	V <sub>CCA</sub> + 0.5	V
		I/O ports (B port)	-0.5	V <sub>CCB</sub> + 0.5	
		Control inputs	-0.5	4.6	
V <sub>O</sub>	Voltage range applied to any output in the high-impedance or power-off state <sup>(2)</sup>	A port	-0.5	V <sub>CCA</sub> + 0.5	V
		B port	-0.5	V <sub>CCB</sub> + 0.5	
V <sub>O</sub>	Voltage range applied to any output in the high or low state <sup>(2)(3)</sup>	A port	-0.5	V <sub>CCA</sub> + 0.5	V
		B port	-0.5	V <sub>CCB</sub> + 0.5	
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0		-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0		-50	mA
I <sub>O</sub>	Continuous output current			±50	mA
	Continuous current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND			±100	mA
θ <sub>JA</sub>	Package thermal impedance <sup>(4)</sup>	GQC/ZQC package		34	°C/W
T <sub>stg</sub>	Storage temperature range		-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input voltage and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The output positive-voltage rating may be exceeded up to 4.6 V maximum if the output current rating is observed.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

Recommended Operating Conditions<sup>(1)(2)(3)(4)</sup>

		$V_{CCI}$	$V_{CCO}$	MIN	MAX	UNIT
$V_{CCA}$	Supply voltage			1.4	$V_{CCB}$	V
$V_{CCB}$	Supply voltage			1.4	3.6	V
$V_{IH}$	High-level input voltage	All inputs <sup>(5)</sup>	1.4 V to 1.95 V		$V_{CCI} \times 0.65$	V
			1.95 V to 2.7 V		1.7	
			2.7 V to 3.6 V		2	
$V_{IL}$	Low-level input voltage	All inputs <sup>(5)</sup>	1.4 V to 1.95 V		$V_{CCI} \times 0.35$	V
			1.95 V to 2.7 V		0.7	
			2.7 V to 3.6 V		0.8	
$V_I$	Input voltage			0	$V_{CCI}$	V
$V_O$	Output voltage	Active state		0	$V_{CCO}$	V
		3-state		0	$V_{CCO}$	
$I_{OH}$	High-level output current (A port)		1.4 V to 1.6 V		-1	mA
			1.65 V to 1.95 V		-2	
			2.3 V to 2.7 V		-4	
			3 V to 3.6 V		-8	
$I_{OL}$	Low-level output current (A port)		1.4 V to 1.6 V		1	mA
			1.65 V to 1.95 V		2	
			2.3 V to 2.7 V		4	
			3 V to 3.6 V		8	
$I_{OH}$	High-level output current (B port)		1.4 V to 1.6 V		-2	mA
			1.65 V to 1.95 V		-4	
			2.3 V to 2.7 V		-8	
			3 V to 3.6 V		-16	
$I_{OL}$	Low-level output current (B port)		1.4 V to 1.6 V		2	mA
			1.65 V to 1.95 V		4	
			2.3 V to 2.7 V		8	
			3 V to 3.6 V		16	
$\Delta t/\Delta t$	Input transition rise or fall rate				5	ns/V
$T_A$	Operating free-air temperature			-40	85	°C

(1)  $V_{CCI}$  is the  $V_{CC}$  associated with the data input port.

(2)  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.

(3)  $V_{CCB}$  must be greater than or equal to  $V_{CCA}$ , except when  $V_{CCB} = 0$  V.

(4) All unused data inputs of the device must be held at  $V_{CCI}$  or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

(5) All A-port I/Os and control inputs are powered by  $V_{CCA}$ .

1B, 2B, 3B, 4B, 9B1, and 10B1 are powered by  $V_{CCB0}$ .

5B, 6B, 7B, 8B, 9B2, 10B2, 11B, 12B, and 14B are powered by  $V_{CCB1}$ .

### Electrical Characteristics<sup>(1)(2)</sup>

over recommended operating free-air temperature range (unless otherwise noted)

			I <sub>OL</sub> = 8 mA	2.3 V	2.3 V			0.55	
			I <sub>OL</sub> = 16 mA	3 V	3 V			0.7	
		I <sub>OL</sub> = 2 mA	Open-drain output (14B)	3 V	3 V			0.45	
I <sub>I</sub>	Control inputs	V <sub>I</sub> = V <sub>CCA</sub> or GND		1.4 V to 3.6 V	3.6 V			±2.5	μA
I <sub>off</sub>	14B	V <sub>O</sub> = V <sub>CCA</sub>		0 to 3.6 V	0 V			±10	μA
I <sub>OZ</sub> <sup>(4)</sup>	A or B ports	V <sub>O</sub> = V <sub>CCO</sub> or GND, V <sub>I</sub> = V <sub>IH</sub> or V <sub>IL</sub>	See function table for input states when outputs are Hi Z	3.6 V	3.6 V			±10	μA
	A port			3.6 V	0 V			±10	
I <sub>CCA</sub>		V <sub>I</sub> = V <sub>CCI</sub> or GND, I <sub>O</sub> = 0		1.6 V	1.6 V			4.5	μA
				1.95 V	1.95 V			5	
				1.95 V	0 V			5	
				2.7 V	2.7 V			5.5	
				3.6 V	0 V			10	
				3.6 V	3.6 V			10	
I <sub>CCB</sub>		V <sub>I</sub> = V <sub>CCI</sub> or GND, I <sub>O</sub> = 0		1.6 V	1.6 V			6.5	μA
				1.95 V	1.95 V			7	
				1.95 V	0 V			0.5	
				2.7 V	2.7 V			7.5	
				3.6 V	0 V			1	
				3.6 V	3.6 V			10	

- (1) V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.  
(2) V<sub>CCI</sub> is the V<sub>CC</sub> associated with the data input port.  
(3) All typical values are at T<sub>A</sub> = 25°C.  
(4) For I/O ports, the parameter I<sub>OZ</sub> includes the input leakage current.

**Electrical Characteristics (continued)**

	Data	A	B	26		
		B	A	26		
$t_{sk(o)}$		A	B	0.7		ns

### Operating Characteristics

$V_{CCA} = 1.8\text{ V}$ ,  $V_{CCB} = 3\text{ V}$ ,  $T_A = 25^\circ\text{C}$

PARAMETER		TEST CONDITIONS	TYP	UNIT
$C_{pdA}$	Power dissipation capacitance per transceiver, A-port input, B-port output	Outputs enabled	9	pF
		Outputs disabled	0.1	
	Power dissipation capacitance per transceiver, B-port input, A-port output	Outputs enabled	16	
		Outputs disabled	7.5	
$C_{pdB0}$	Power dissipation capacitance per transceiver, A-port input, B-port output	Outputs enabled	16.5	pF
		Outputs disabled	0.1	
	Power dissipation capacitance per transceiver, B-port input, A-port output	Outputs enabled	4	
		Outputs disabled	2	
$C_{pdB1}$	Power dissipation capacitance per transceiver, A-port input, B-port output	Outputs enabled	18	pF
		Outputs disabled	0.1	
	Power dissipation capacitance per transceiver, B-port input, A-port output	Outputs enabled	6	
		Outputs disabled	3	

PARAMETER MEASUREMENT INFORMATION

TEST	S1
$t_{pd}$	Open
$t_{PLZ}/t_{PZL}$	$2 \times V_{CCO}$
$t_{PHZ}/t_{PHL}$	GND
$t_{PLZ}/t_{PZL}$ (OD)	$2 \times V_{CCO}$

$V_{CCO}$	$C_L$	$R_L$	$V_{TP}$
$1.5 V \pm 0.1 V$	15 pF	2 kΩ	0.1 V
$1.8 V \pm 0.15 V$	15 pF	2 kΩ	0.15 V
$2.5 V \pm 0.2 V$	15 pF	2 kΩ	0.15 V
$3.3 V \pm 0.3 V$	15 pF	2 kΩ	0.3 V

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10 \text{ MHz}$ ,  $Z_O = 50 \Omega$ ,  $dv/dt \geq 1 \text{ V/ns}$ .
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
  - H.  $V_{CCi}$  is the  $V_{CC}$  associated with the input port.
  - I.  $V_{CCo}$  is the  $V_{CC}$  associated with the output port.

Figure 1. Load Circuit and Voltage Waveforms

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74AVCA406DGGR	ACTIVE	TSSOP	DGG	48	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	AVCA406	<a href="#">Samples</a>
SN74AVCA406DGGRG4	ACTIVE	TSSOP	DGG	48	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	AVCA406	<a href="#">Samples</a>
SN74AVCA406ZQCR	ACTIVE	BGA MICROSTAR JUNIOR	ZQC	48	2500	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	WM406	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
