SN75LVDS31D (Marked as 75LVDS31)

SLLS359C - JUNE 1999 - REVISED JUNE 2001

- Meets or Exceeds the Requirements of ANSI TIA/EIA-644 Standard
- Low-Voltage Differential Signaling With Typical Output Voltage of 350 mV and a 100-Ω Load
- Signaling Rates up to 155 Mbps
- Operates From a Single 3.3-V Supply
- Driver at High Impedance When Disabled or With V_{CC} = 0
- Low-Voltage TTL (LVTTL) Logic Input Levels
- Characterized For Operation From 0°C to 70°C

description

The SN75LVDS31 and SN75LVDS9638 are differential line drivers that implement the electrical characteristics of low-voltage differential signaling (LVDS). This signaling technique lowers the output voltage levels of 5-V differential standard levels (such as TIA/EIA-422B) to reduce

the power, increase the switching speeds, and allow operation with a 3.3-V supply rail. Any of the four current-mode drivers will deliver a minimum differential output voltage magnitude of 247 mV into a $100-\Omega$ load when enabled.

The intended application of these devices and signaling technique is for point-to-point baseband data transmission over controlled impedance media of approximately 100 Ω . The transmission media may be printed-circuit board traces, backplanes, or cables. The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media and the noise coupling to the environment.

The SN75LVDS31 and SN75LVDS9638 are characterized for operation from 0°C to 70°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

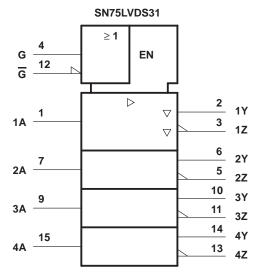

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

|---|--------------------------------|
| Input voltage range: Inputs | |
| Y or Z | –0.5 V to 4 V |
| Continuous total power dissipation | . See Dissipation Rating Table |
| Storage temperature range, T _{stg} | –65°C to 150°C |
| Storage temperature range, T _{stg} Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds | 260°C |

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltages, except differential I/O bus voltages, are with respect to the network ground terminal.

| t _{sk(pp)} | Part-to-part skew¶ | | | | 1 | ps |
| ^t pZH | Propagation delay time, high-impedance-to-high-level output | | | | 25 | ns |
| ^t pZL | Propagation delay time, high-impedance-to-low-level output | | | | 25 | ns |
| ^t pHZ | Propagation delay time, high-level-to-high-impedance output | See Figure 4 | | | 25 | ns |
| ^t pLZ | Propagation delay time, low-level-to-high-impedance output | | | | 25 | ns |

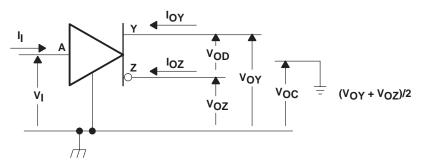

[†] All typical values are at $T_A = 25^{\circ}C$ and with $V_{CC} = 3.3 \text{ V}$. [‡] $t_{sk(p)}$ is the magnitude of the time difference between the high-to-low and low-to-high propagation delay times at an output. [§] $t_{sk(o)}$ is the magnitude of the time difference between the outputs of a single device with all of their inputs connected together.

It sk(p) is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, same temperature, and have identical packages and test circuits.

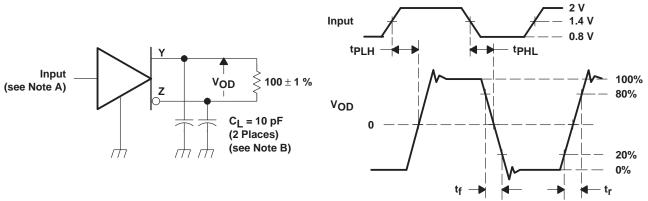

SLLS359C - JUNE 1999 - REVISED JUNE 2001

APPLICATIONS INFORMATION

- NOTES: A. Place a 0.1 μ F and a 0.001 μ F Z5U ceramic, mica or polystyrene dielectric, 0805 size, chip capacitor between V_{CC} and the ground plane. The capacitors should be located as close as possible to the device terminals.
 - B. Unused enable inputs should be tied to V_{CC} or GND as appropriate.

Figure 5. Typical Application Circuit Schematic

SLLS359C - JUNE 1999 - REVISED JUNE 2001

APPLICATIONS INFORMATION

NOTES: A. Resistors are leadless thick-film (0603) 5% tolerance.

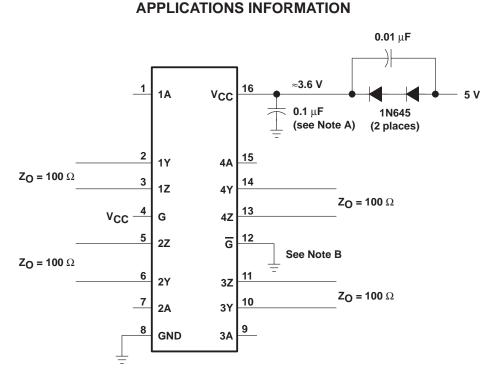

B. Decoupling capacitance is not shown but recommended.

- C. V_{CC} is 3 V to 3.6 V.
- D. The differential output voltage of the 'LVDS31 can exceed that specified by IEEE1394.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <= 1000ppm threshold. Antimony trioxide based flame retardants must also meet the <= 1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
