

TS3DV642 12-Channel 1:2 MUX/DEMUX with 1.8 V Compatible Control and Power-Down Mode

1 Features

- Switch Type: 2:1 or 1:2
- Dynamic Characteristics
 - Differential Bandwidth (–3 dB)
 - Port A: 6.9 GHz Typical
 - Port B: 7.5 GHz Typical
 - Crosstalk (at 1.7 GHz): –40 dB
 - Isolation (at 1.7 GHz): –23 dB
 - Insertion Loss (DC)
 - Port A: –0.75 dB
 - Port B: –1.0 dB
 - Return Loss (at 1.7 GHz): –15.9 dB
 - Intra-Pair (Bit-Bit) Skew
 - Port A: 2 ps
 - Port B: 6 ps
 - R_{ON}
 - Port A: 6.5 Ω
 - Port B: 8.2 Ω
 - C_{ON} at 1 GHz: 0.5 pF (Typical)
- V_{CC} Range: 2.6 V to 4.5 V
- I/O Voltage Range: 0 V to 5 V
- Special Features
 - I_{OFF} Protection Prevents Current Leakage in Powered Down State ($V_{CC} = 0$ V)
- ESD Performance
 - 2-kV Human Body Model (A114B, Class II)
 - 1-kV Charged Device Model (C101)
- 42-pin WQFN Package (9 mm x 3.5 mm, 0.5 mm pitch)

2 Applications

- HDMI 2.0 With Support for 4k2k up to 60 Hz
- DVI 1.0 Signal Switching
- DisplayPort 1.4 Signal Switching
- General Purpose TMDS Signal Switching
- General Purpose LVDS Signal Switching
- General Purpose High-Speed Signal Switching

3 Description

The TS3DV642 is a 12 channel 1:2 or 2:1 bi-directional multiplexer/demultiplexer. The TS3DV642 operates from a 2.6 V to 4.5 V supply, making it suitable for battery-powered applications. It offers low and flat on-state resistance (R_{ON}) as well as low I/O capacitance which allows it to achieve a typical bandwidth of up to 7.5 GHz. The device provides the high bandwidth necessary for HDMI and DisplayPort applications.

The TS3DV642 offers a power-down mode, in which all channels become Hi-Z and the device operates with minimal power.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (December 2015) to Revision E	Page
• Changed <i>Application</i> From: DisplayPort 1.2a Signal Switching To: DisplayPort 1.4 Signal Switching.....	1
• Added Test Condition of 4.05 GHZ at –35 dB to Xtalk in the <i>Dynamic Characteristics</i> table.....	7
• Added Test Condition of 4.05 GHZ at –25 dB to OISO in the <i>Dynamic Characteristics</i> table.....	7

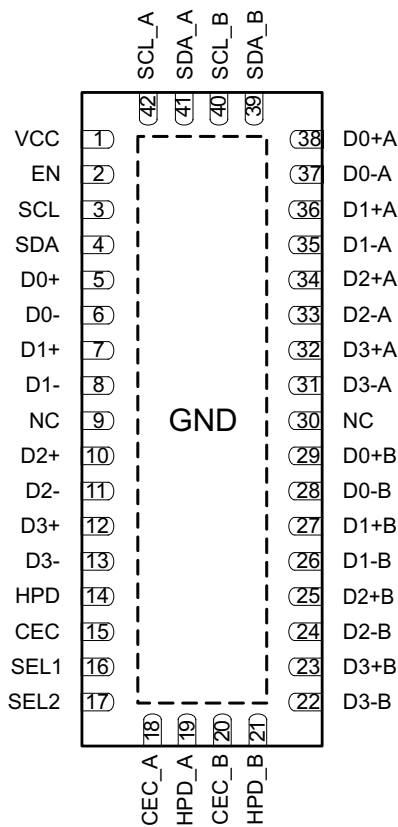

Changes from Revision C (November 2014) to Revision D	Page
• Changed the storage temperature to the <i>Absolute Maximum Ratings</i> table	5

Changes from Revision B (August 2013) to Revision C	Page
• Added Handling Rating table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section.	1
• Deleted row from ABS MAX table: Package thermal impedance	5
• Added the Handling Ratings table, deleted the T_{stg} row Absolute Maximum ratings table and added to Handling Ratings table.	5

Changes from Revision A (July 2013) to Revision B	Page
• Changed <i>Application</i> From: HDMI 1.4/DVI 1.0 Signal Switching To: HDMI 1.4b with support for 4k2k up to 30 Hz	1
• Added <i>Application</i> : DVI 1.0 Signal Switching	1
• Changed Application From: DisplayPort 1.2 Signal Switching To: DisplayPort 1.2a Signal Switching.....	1
• Added Eye Pattern and Time Interval Error Histogram graphics, Figure 10 to Figure 13	9

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT	
V _{CC}	Supply voltage range	-0.5	5.5	V	
V _{I/O}	Analog voltage range ⁽²⁾⁽³⁾⁽⁴⁾	All I/O	-0.5	5.5	V
V _{IN}	Digital input voltage range ⁽²⁾⁽³⁾	SEL1, SEL2, EN	-0.5	5.5	V
I _{I/O} K	Analog port diode current	V _{I/O} < 0	-50	mA	
I _{IK}	Digital input clamp current	V _{IN} < 0	-50	mA	
I _{I/O}	On-state switch current ⁽⁵⁾		-128	128	mA
T _{stg}	Storage temperature range		-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltages are with respect to ground, unless otherwise specified.

(3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(4) V_I and V_O are used to denote specific conditions for V_{I/O}.

(5) I_I and I_O are used to denote specific conditions for I_{I/O}.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, ⁽¹⁾	±2000
		Charged device model (CDM), per JEDEC specification JESD22-C101, ⁽²⁾	±1000
			V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage	2.6	4.5	V
V _{I/O}	Input/Output voltage	0	5.5	V
T _A	Operating free-air temperature	-40	85	°C

(1) All unused control inputs of the device must be held at VDD or GND to ensure proper device operation. Refer to the *TI application report, Implications of Slow or Floating CMOS Inputs*, literature number [SCBA004](#).

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TS3DV642	UNIT
		RUA	
		42 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	31.5	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	16.2	°C/W
R _{θJB}	Junction-to-board thermal resistance	5.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	0.2	°C/W
ψ _{JB}	Junction-to-board characterization parameter	5.4	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	2.0	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS ⁽¹⁾	MIN	TYP ⁽²⁾	MAX	UNIT
PORT A						
R _{ON}	ON-state resistance	D0 to D3	V _{CC} = 3 V, 1.5 V ≤ V _{I/O} ≤ V _{CC} , I _{I/O} = -40 mA	6.5	9.5	Ω
		SCL, SDA, HPD, CEC		6	9.5	Ω
R _{ON(flat)} ⁽³⁾	ON-state resistance flatness	All I/O	V _{CC} = 3 V, V _{I/O} = 1.5 V and V _{CC} , I _{I/O} = -40 mA	1.5		Ω
ΔR _{ON} ⁽⁴⁾	On-state resistance match between high-speed channels	D0 to D3	V _{CC} = 3 V, 1.5 V ≤ V _{I/O} ≤ V _{CC} , I _{I/O} = -40 mA	0.4	1	Ω
I _{OFF}	Leakage under power off	All outputs	V _{CC} = 0 V, V _{I/O} = 0 to 3.6 V, V _{IN} = 0 V to 5.5 V		±10	μA
PORT B						
R _{ON}	ON-state resistance	D0 to D3	V _{CC} = 3 V, 1.5 V ≤ V _{I/O} ≤ V _{CC} , I _{I/O} = -40 mA	8.2	10.5	Ω
		SCL, SDA, HPD, CEC		6	9.5	Ω
R _{ON(flat)} ⁽³⁾	ON-state resistance flatness	All I/O	V _{CC} = 3 V, V _{I/O} = 1.5 V and V _{CC} , I _{I/O} = -40 mA	1.5		Ω
ΔR _{ON} ⁽⁴⁾	On-state resistance match between high-speed channels	D0 to D3	V _{CC} = 3 V, 1.5 V ≤ V _{I/O} ≤ V _{CC} , I _{I/O} = -40 mA	0.4	1	Ω
I _{OFF}	Leakage under power off	All outputs	V _{CC} = 0 V, V _{I/O} = 0 V to 3.6 V, V _{IN} = V to 5.5 V		±10	μA
DIGITAL INPUTS (SEL1, SEL2, EN)						
V _{IH}	High-level control input voltage	SEL1, SEL2, EN		1.4		V
V _{IL}	Low-level control input voltage	SEL1, SEL2, EN			0.5	V
I _{IH}	Digital input high leakage current	SEL1, SEL2, EN	V _{CC} = 3.6 V, V _{IN} = V _{DD}		±10	μA
I _{IL}	Digital input low leakage current	SEL1, SEL2, EN	V _{CC} = 3.6 V, V _{IN} = GND		±10	μA
SUPPLY						
I _{CC}	VCC supply current		V _{CC} = 3.6 V, I _{I/O} = 0, Normal Operation Mode, EN = H	50		μA
I _{CC, PD}	VCC supply current in power-down mode		V _{CC} = 3.6 V, I _{I/O} = 0, EN = L	6		μA

- (1) V_I, V_O, I_I, and I_O refer to I/O pins, V_{IN} refers to the control inputs.
 (2) All typical values are at V_{CC} = 3.3 V (unless otherwise noted), T_A = 25°C.
 (3) R_{ON(FLAT)} is the difference of R_{ON} in a given channel at specified voltages.
 (4) ΔR_{ON} is the difference of R_{ON} from center port to any other ports.

6.6 Dynamic Characteristics

Over recommended operation free-air temperature range, $V_{CC} = 3.3V \pm 0.3V$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
C_{IN}	Digital input capacitance	$f = 1 \text{ MHz}$, $V_{IN} = 0 \text{ V}$		6		pF
C_{off}	Switch OFF capacitance	$f = 1 \text{ GHz}$, $V_{IO} = 0 \text{ V}$, Output is open, Switch is OFF		0.3		pF
C_{on}	Switch ON capacitance	$f = 1 \text{ GHz}$, $V_{IO} = 0 \text{ V}$, Output is open, Switch is ON		0.5		pF
Xtalk	Differential Crosstalk	$R_L = 50 \Omega$ at 1.7 GHz (See Figure 17)		-40		dB
		$R_L = 50 \Omega$ at 2.7 GHz (See Figure 17)		-40		
		$R_L = 50 \Omega$ at 4.05 GHz (See Figure 17)		-35		
OISO	Differential Off Isolation	$R_L = 50 \Omega$ at 1.7 GHz (See Figure 18)		-23		dB
		$R_L = 50 \Omega$ at 2.7 GHz (See Figure 18)		-28		
		$R_L = 50 \Omega$ at 4.05 GHz (See Figure 18)		-25		
IL	Insertion Loss	Port A at DC		-0.75		dB
		Port B at DC		-1		
BW	Differential Bandwidth (-3 dB)	Port A	$R_L = 50 \Omega$, All channels (See Figure 19)		6.9	GHz
		Port B	$R_L = 50 \Omega$, All channels (See Figure 19)		7.5	

(1) All Typical Values are at $V_{CC} = 3.3 \text{ V}$ (unless otherwise noted), $T_A = 25^\circ\text{C}$.

6.7 Switching Characteristics

over recommended operation free-air temperature range, $V_{CC} = 3.3 \text{ V} \pm 0.3 \text{ V}$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
t_{ON} ⁽²⁾	Switch turn-on time	All I/O			100	μs
t_{SWITCH} ⁽³⁾	Switching time between channels	All I/O		20		μs
t_{pd}	Propagation Delay	Port A	D0 to D3		30	ps
			SCL, SDA, HPD, CEC		30	
		Port B	D0 to D3		40	
			SCL, SDA, HPD, CEC	See Figure 16		
t_{SKEW}	Inter-pair Skew	Port A	D0 to D3	Between +ve and -ve signals of each Channel	2	ps
		Port B			2	
	Intra-pair Skew	Port A		2		
		Port B		Between Channel 0, 1, 2, or 3	6	

(1) All typical values are at $V_{CC} = 3.3 \text{ V}$ (unless otherwise noted), $T_A = 25^\circ\text{C}$.

(2) t_{ON} is the time it takes the output to recover after enabling switches

(3) t_{SWITCH} is the time it takes for the output to recover after the state is changed

8 Detailed Description

8.1 Overview

TS3DV642 is a 12-channel 1:2 or 2:1 bidirectional multiplexer/demultiplexer. The TS3DV642 operates from a 2.6 to 4.5 V supply, making it suitable for battery-powered applications. It offers low and flat on-state resistance as well as low I/O capacitance which allows it to achieve a typical bandwidth of up to 7.5 GHz. The device provides the high bandwidth necessary for HDMI and DisplayPort applications.

8.2 Functional Block Diagram

8.3 Feature Description

The TS3DV642 is based on proprietary TI technology which uses FET switches driven by a high-voltage generated from an integrated charge-pump to achieve a low on-state resistance. TS3DV642 has 12-channel bidirectional switches with a high bandwidth (~ 7.5 GHz). TS3DV642 uses an extremely low power technology and uses only 50 μA I_{CC} in active mode. The device has integrated ESD that can support up to 2-kV Human-Body Model (HBM) and 1-kV Charge Device Model (CDM). TS3DV642 is offered in a 42-pin QFN package (9 mm x 3.5 mm) with 0.5 mm pitch. The device can support analog I/O signal in 0 to 5 V range. TS3DV642 also has a special feature that prevents the device from back-powering when the V_{CC} supply is not available and an analog signal is applied on the I/O pin. In this situation this special feature prevents leakage current in the device. The TS3DV642 is not designed for passing signals with negative swings; the high-speed signals need to be properly DC biased (usually ~1 V) before being passed to the TS3DV642. The differential S21 characteristics as a function of frequency for Port A and Port B are shown in [Figure 1](#) and [Figure 2](#), respectively. The figures show a differential bandwidth of 6.7 GHz and 7.7 GHz for Port A and Port B, respectively. The cross-talk (XTALK) characteristics as a function of frequency are shown in [Figure 3](#) and [Figure 4](#), respectively. The off-state isolation (OISO) characteristics for Port A and Port B are shown in [Figure 5](#) and [Figure 6](#), respectively. The return loss

Feature Description (continued)

characteristics (S11) are shown in [Figure 7](#). The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps (for HDMI 1.4 applications) with TS3DV642 in path for Port A is shown in [Figure 10](#). The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps through path (no TS3DV642) for Port A is shown in [Figure 11](#). The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps (for HDMI 1.4 applications) with TS3DV642 in path for Port B is shown in [Figure 12](#). The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps through path (no TS3DV642) for Port A is shown in [Figure 13](#). The eye pattern at 6.0 Gbps (for HDMI 2.0 applications) with TS3DV642 in path for Port A is shown in [Figure 8](#). The eye pattern at 6.0 Gbps (for HDMI 2.0 applications) through path (no TS3DV642) for Port A is shown in [Figure 9](#). Note that the eye patterns are measured with only one channel on at a time.

8.4 Device Functional Modes

Figure 20. Logic Diagram

Device Functional Modes (continued)

Table 1 lists the device functions for the TS3DV642 device.

Table 1. Functional Table

EN	SEL1	SEL2	FUNCTION
L	X	X	Switch disabled. All channels are Hi-Z.
H	L	L	Channel D0+/D0– to D0+A/D0–A is ON. All the other channels (D1+/D1–, D2+/D2–, D3+/D3–, SCL, SDA, HPD, CEC) are Hi-Z.
H	L	H	Channel D0+/D0– to D0+B/D0–B is ON. All the other channels (D1+/D1–, D2+/D2–, D3+/D3–, SCL, SDA, HPD, CEC) are Hi-Z.
H	H	L	All A channels are enabled. All B channels are Hi-Z.
H	H	H	All B channels are enabled. All A channels are Hi-Z.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

TS3DV642 can be used for two typical DisplayPort applications. [Figure 21](#) describes a DisplayPort (DP) application where TS3DV642 is used to switch between two different graphic & memory controllers on a single DP connector. [Figure 24](#) shows a docking application where TS3DV642 is used to switch signals from a single graphic and memory controller to a display port and docking station connector. Note that the TS3DV642 is not designed for passing signals with negative swings; the high-speed signals need to be properly DC biased (usually ~1 V from the graphic controller side) before being passed to the TS3DV642.

9.2 Typical Application

9.2.1 Display Port (DP) Application

Display port (DP) application with TS3DV642 used to switch between two different graphic & memory controllers on a single DP connector

Figure 21. Display Port Schematic

Typical Application (continued)

9.2.1.1 Design Requirements

Table 2. Design parameters for Display Port application

Design parameter	Example value
V_{CC}	2.6 V to 4.5 V
VCC decoupling capacitor	0.1 μ F
MainLink (ML) and AUX coupling capacitor	75 nF to 200 nF
AUX Pull-up / Pull-down resistors	10 k Ω to 100 k Ω
Pull-up / Pull-down resistors for SEL1 / SEL2 pins	10 k Ω

9.2.1.2 Detailed Design Procedure

The TS3DV642 is designed to operate with 2.6 V – 4.5 V power supply. The wide power supply range allows flexibility for battery powered applications. If a higher power supply is used in the system, a voltage regulator can be used to bring down the voltage to 2.6 V – 4.5 V range. Decoupling capacitors may be used to reduce noise and improve power supply integrity. AC coupling capacitors in 75 nF – 200 nF range must be placed on the MainLink (ML) and AUX lanes. In this particular application the AC coupling capacitors are shown on the connector side. The AC coupling capacitors may also be placed on the signal path on controller side. The AUX+ line must be pulled-down weakly through a resistor to ground and the AUX– line must be pulled-up weakly through a resistor to VCC.

9.2.1.3 Application Curves

Figure 22. Eye Pattern: 6.0 Gbps Port A, D1+ to D1+A, D1- to D1-A (Only One Channel Measured at a Time)

Figure 23. Eye Pattern: 6.0 Gbps, No Device Through Path (Only One Channel Measured at a Time)

9.2.2 Docking Application

Docking Application with TS3DV642 used to switch signals from a single graphic and memory controller to a display port and docking station connector.

Figure 24. Docking Application Schematic

9.2.2.1 Design Requirements

Table 3. Design parameters for docking application

Design parameter	Example value
V _{CC}	2.6 V to 4.5 V
VCC decoupling capacitor	0.1 µF
MainLink (ML) and AUX coupling capacitor	75 nF to 200 nF
AUX Pull-up / Pull-down resistors	10 kΩ to 100 kΩ
Pull-up / Pull-down resistors for SEL1 / SEL2 pins	10 kΩ

9.2.2.2 Detailed Design Procedure

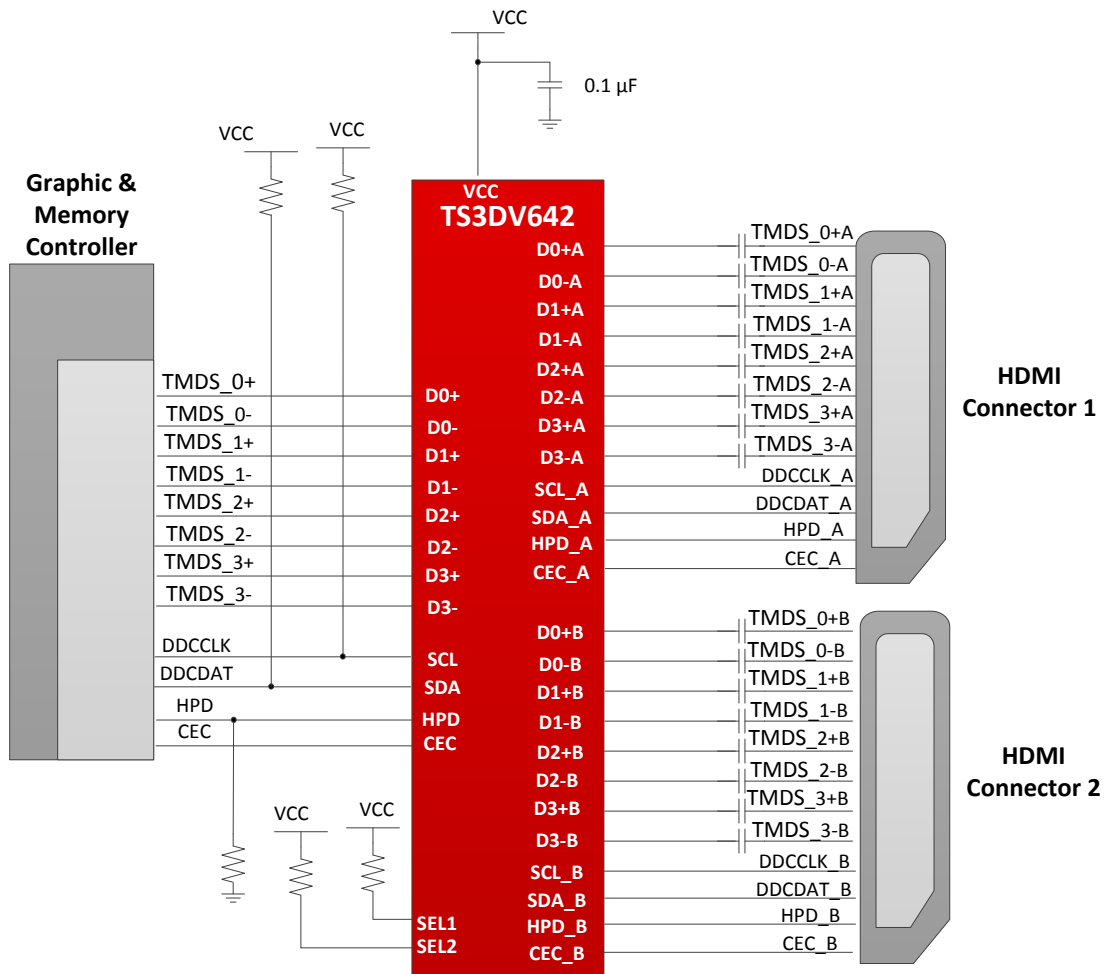

The TS3DV642 is designed to operate with 2.6 V – 4.5 V power supply. The wide power supply range allows flexibility for battery powered applications. If a higher power supply is used in the system, a voltage regulator can be used to bring down the voltage to 2.6 V – 4.5 V range. Decoupling capacitors may be used to reduce noise and improve power supply integrity. AC coupling capacitors in 75 nF – 200 nF range must be placed on the MainLink (ML) and AUX lanes. In this particular application the AC coupling capacitors are shown on the connector side. The AC coupling capacitors may also be placed on the signal path on controller side. The AUX+ line must be pulled-down weakly through a resistor to ground and the AUX– line must be pulled-up weakly through a resistor to VCC.

Table 4. Design Parameters for HDMI Application

Design parameter	Example value
V_{CC}	2.6 V to 4.5 V
VCC decoupling capacitor	0.1 μ F
DDC Pull-up resistors	2 k Ω to 5 V
Pull-up / Pull-down resistors for SEL1 / SEL2 pins	10 k Ω
HPD Pull-down resistor	100 k Ω

9.2.3.2 Detailed Design Procedure

The TS3DV642 is designed to operate with 2.6 V – 4.5 V power supply. The wide power supply range allows flexibility for battery powered applications. If a higher power supply is used in the system, a voltage regulator can be used to bring down the voltage to 2.6 V – 4.5 V range. Decoupling capacitors may be used to reduce noise and improve power supply integrity. Pull-up resistors to 5 V must be placed on the source side DDC clock and data lines according to the HDMI standard. A weak pull-down resistor must be placed on the source side HPD line.

9.2.3.3 Application Curves

Figure 28. Eye Pattern: 6 Gbps Port A, D1+ to D1+A, D1- to D1-A (Only One Channel Measured at a Time)

Figure 29. Eye Pattern: 6 Gbps, No Device Through Path (Only One Channel Measured at a Time)

10 Power Supply Recommendations

V_{CC} should be in the range of 2.6 V to 4.5 V. Voltage levels above those listed in the Absolute Ratings table should not be used. Decoupling capacitors may be used to reduce noise and improve power supply integrity. There are no power sequence requirements for the TS3DV642.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, the following commonly used printed-circuit board layout guidelines are recommended:

- Decoupling capacitors should be used between power supply pin and ground pin to ensure low impedance to reduce noise. To achieve a low impedance over a wide frequency range use capacitors with a high self-resonance frequency.
- ESD and EMI protection devices (if used) should be placed as close as possible to the connector.
- Short trace lengths should be used to avoid excessive loading.
- To minimize the effects of crosstalk on adjacent traces, keep the traces at least two times the trace width apart.
- Separate high-speed signals from low-speed signals and digital from analog signals.
- Avoid right-angle bends in a trace and try to route them at least with two 45° corners.
- The high-speed differential signal traces should be routed parallel to each other as much as possible. The traces are recommended to be symmetrical.
- A solid ground plane should be placed next to the high-speed signal layer. This also provides an excellent low-inductance path for the return current flow.

11.2 Layout Example

TS3DV642 application with a single controller interfacing with two HDMI connectors.

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TS3DV642A0RUAR	ACTIVE	WQFN	RUA	42	3000	Green (RoHS & no Sb/Br)	CU NIPDAU Call TI	Level-3-260C-168 HR		SD642A0	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - QFN (Quad Flatpack No-Lead) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.

THERMAL PAD MECHANICAL DATA

RUA (R-PWQFN-N42)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Exposed Thermal Pad Dimensions

4208352/E 01/13

NOTE: All linear dimensions are in millimeters

RUA (R-PWQFN-N42)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
